PLEASURE READING

Seeing the Rebel: Or, How to Do Things with Dictionaries in Nineteenth-Century America

Tim Cassedy

Southern Methodist University

I spend a lot of time with texts that are pretty sure of what they have to say. For example, this one—an 1816 essay about language by Timothy Dwight, the president of Yale:

The English language abounds in words, expressive of the rights, privileges, and duties, of freemen. This fact is a complete proof, independently of all history, that they [the English] have been much occupied in enjoying, and maintaining, these rights and privileges; and in performing these duties: in other words, that they have been a nation of freemen.¹

I find this kind of utter certitude revealing, especially when I can't quite relate to it: I'm dubious about Dwight's claim that there is an "abundance" of words about freedom in English—and even if there is, that prevalence does not seem to me like "complete proof" of the essential liberality of English national history. Still, the history of ideas is often the history of superseded obviousnesses, and Dwight's perception of what the English language verifies about the English people is useful evidence for the argument I'm making in my book about language and identity at the beginning of the nineteenth century.

Arguments are good. So is evidence. But the more time I spend with overt, expository texts like Dwight's, the more I appreciate texts and textual artifacts that resist exposition. I came across Dwight's essay

Figure 1. Handwritten marginalia in a copy of Thomas Browne's *Union Dictionary* (London, 1800) at the American Philosophical Society (call number VGN 423 B81U). All images are courtesy of the American Philosophical Society. This inscription reads: "I want to speak PRIVately to you."

when I was at the American Philosophical Society in Philadelphia a few years ago, reading around in early nineteenth-century philology, and I knew immediately what to do with it. But it was a different discovery at the APS, one that I did not know what to do with, that gave me a greater and more revealing pleasure, even if it is not a pleasure that I know how to make evidentiary use of. It was a copy of Thomas Browne's *Union Dictionary*, printed in London in 1800, in which some unknown nineteenth-century child with a pencil had apparently amused herself by making words and sentences out of the printed "catch letters" on about a hundred of the book's five hundred pages. As I turned the pages of this dictionary, puzzling out the haphazard handwriting, I felt that I was reading an unusually frank, if oddly coauthored, record of a nineteenth-century child's subjective world: promiscuous fragments of the child's heard or read environment, refracted through her imagination and her imperfect literacy, and then through the chance deletions of over-trimmed pages and fading pencil marks. Although it's not possible to know the identity of the child who penciled these words in the dictionary's margins (the book's movements between being printed in 1800 and being donated to the APS in 1991 are unknown), it is clear that the annotations date from the nineteenth century, as they had evidently already been made when the book's pages were trimmed and put into the current, decidedly nineteenth-century binding. To the extent that I was able to decipher the inscriptions, here they are. They have never been printed before:

a **BAR** of iron is heavy
DELia
FIDdle sticks [and?] a **FIG**
FILl the Jugs with **FINE** rum
FIR [illegible]
the water **FLO**ws down
GULlup it do[wn?]
HE did not like it
HIStory
INFinite
PIN your [illegible]
your in the **PIT** at last
POP goes the cork
pigs **POR**k
PORE the water out
POSSitively I did
clean the **POT**s
do not **POU**t so
PRAy do
I want to speack **PRIV**ately to
you
you **PUL**led me down do not
PUNish me
the pussy **PUR**s
QUIs me not
RAise
he is very **RAV**inous
see the **REB**ble
REMember me
REPentory
REVERent old man
[illegible] **REW**ard you
RIG the ship
ROW the [illegible]
this **RUM** is [illegible]
SABbath
SACred
SALly come here
SALly I say come here
SARah is rich it is **SAT**uday

she did **SCA**re you
you have got **SCA**ches
you [illegible] **SCH**ool [illegible]
SCOld
SCOld at a great rate
SCRach
[illegible] is a **SEA**man
get the **SEED** out at the gardin
Moona is very **SEN**seble
see my new **SERV**ant she must
SET down
you must **SHA**re you [trimmed
off]
SHE is very **SHI** indeed
SHOw me that doll
SIDney is a very [trimmed off]
you **Backslide**ing **SIN**ner
SLIde with me
shut the **SKIL**ite——**SLA**ve
I say
wake up you **SLO**th Black you
shame **SLU**t
you are very **SMAR**t inde[de?]. O
wall **SMO**ther
I will **SNAC**h that away if you do
not give it to me
do not **SOB** so
SOILiman I [illegible]
SOLLoman give me **SOME** bread
SOPha
I am very **SOR**ry indeed
poor **SOUL** how I pitty you
Serpents **VOM**it poison
to win the **WIN** the prise is you
will be **WISE**
WOO to you
do do not **WRI**ng your hands so
XYSey
YES I guees so
that **YOU**ng one is not [illegible]

Figure 2.

To me, this artifact is the scarlet letter in the attic of Hawthorne's custom-house, brimming vividly with meanings that are not fully knowable. In some ways it is the opposite of Timothy Dwight: opaque and fragmentary, its meaning elusive and uncertain, working not in parallel with my interpretive training but somehow askew or orthogonal to it. I can't explicate this text the way I can explicate Dwight. Yet that opacity is precisely the source of the liberating pleasure I took in this object. It seemed to authorize (indeed, require) speculation and imagination and play, freeing me from a utilitarian relationship to archival research as the gathering of evidence. Years later, I like to pull up the images I took of the artifact, arranging and rearranging the inscriptions into narratives and characters in my mind: Moona is the **SEN**seble one; Sally and Sidney are the ones who **POPP**ed the cork on a jug of **FINE** rum and **GUL**luped down its contents. The text is generative and open-ended, an invitation to make my own meaning. I can allow it to mean different things because it is too sketchy, incomplete, and illegible to allow any certainties about what it "really" means.

In this respect, I have something in common with the handwritten text's nineteenth-century creator, who also made meaning out of textual fragments ensconced in institutional trappings. If a dictionary seems like an unlikely venue for a nineteenth-century child's textual creativity, it bears remembering how many non-lexicographical purposes dictionaries have always served: as doorstops, booster seats, classroom projectiles. They were also simply available; if you owned only two books in nineteenth-century America, they might well have been a dictionary and a Bible.² And for all their stern authority, nineteenth-century dictionaries seem to have invited their own supplementation: inside nineteenth-century dictionaries I have found handwritten Greek and Hebrew alphabets, family genealogies, drawings, flowers, and four-leaf clovers.

Figure 3.

If we tend to think of dictionaries as boring and somewhat unfriendly books that dictate rules and don't care about a child's individuality, we can easily miss the significance of nineteenth-century dictionaries as sentimental sites of imaginative and material expression in which children wrote their names, circled words they knew, drew pictures, and tucked things away. The marginalia in this artifact, therefore, exemplifies the interactive and even collaborative nature of the dictionary in the nineteenth century, as a potential repository for the efforts of your creative self and the fragments of your material world. Dictionaries had a place for you, the way they had a place for every word. To be sure, a dictionary did not offer the same expressive possibilities as a blank piece of paper. The handwritten countercontext to this dictionary's printed text, for example, is constrained by alphabetic order and the random occasion of the three-letter printed stems. However, to state the central paradox of Oulipians and bondage fetishists, constraints are also liberating: while you're busy paying attention to the constraint, your inhibited secrets sneak out the side door and hit the town. I think this may be the least self-conscious nineteenth-century document I have ever encountered.

I say this not because it is marginalia—which, like most other writing, has formal conventions, a history, and real and imagined audiences³—but because it seems to be an exercise in what would later be called free association. More specifically, the child who created it stumbled into a textual activity that would become one of the basic tools for studying the unconscious mind in twentieth-century experimental psychology: the word stem completion task. Like cloud-watching or the Rorschach inkblot test, this exercise pitches arbitrary cognitive material to the human subject, who projects meaning onto that material according to what already exists in his or her own mind. For research psychologists, the point of the stem completion task is that it offers access to the un-

Figure 4.

conscious in an experimentally controllable way. Dreams are another route into the unconscious, but not one that can be replicated in a laboratory setting; also, dreams are difficult to analyze in the numerical terms of statistical significance currently favored by academic social scientists. By contrast, it is easy to divide volunteers into two groups, subject the test group to some sort of manipulation, and see how their stem completions differ from the controls. For example, if you show American research subjects an image of a black male face (even subliminally, for a fraction of a second), you will see a statistically significant uptick in the number of racially stereotypical responses when you then ask them to complete the stems DU__ and STU__.⁴ Social psychologists are understandably interested in the cognitive and experiential factors that modulate this result.

As a literary scholar, I feel somewhat uneasy about such experiments, since I am trained to see words as elusive and unstable, their meanings always shifting and contextual. I am very uncomfortable drawing any conclusions from the mere presence or absence of a word. On the other hand, I share psychologists' core assumption that people reveal themselves in language, sometimes against their intentions or beyond their conscious understanding. I also share psychologists' interest in the non sequitur, in the sense that the point of any free association exercise is to get the analysand to say something that isn't generic. Genres are socially approved solutions to problems of representation; in my research, I often want to know what was socially approved, but I also often want to know about subjective realities that were socially unacceptable or illegible. Records of such realities are very hard to come by, because most of what gets written down, printed, preserved, archived, and cataloged is generic: it makes sense according to prevailing norms of what counts as meaningful. Hence the perpetual archival problem that it is always much easier to hear from authorized voices

Figure 7.

This discursive appearance of slavery begins in a comparatively tentative form, with a directive issued not to the enslaved person but to someone else (“see my new SERvant”). The second imperative is more absolute: it is a command not *about* the subordinate but *to* her, and it eliminates the sliver of third-person grammatical agency available in the first, as “she must do X” yields to “do X.” The potentially contractual “SERvant” of the first command has also become a definitively chattel “SLAve.” The third statement most robustly outlines the conceptual scope of American race slavery, claiming supervisory authority not just over the slave’s labor (as in the command to “shut the SKillite”) but over her consciousness (“wake up”), addressing the slave as racial other (“Black”), and positioning that other as a moral inferior (“sloth,” “shame”). Furthermore, the interpellation of the enslaved addressee as a “shame[ful] SLUt” gestures toward the sexual violence to which female slaves were subjected and for which they were also blamed, an issue elaborately thematized in Harriet Jacobs’s *Incidents in the Life of a Slave Girl* (1861) as well as other literary treatments of slavery. Although the word “slut” could imply merely physical messiness in nineteenth-century English, it also carried a moral significance that included—and by the end of the century would narrow into—the more specifically sexual charge with which we are more familiar. (*Slut* is defined on the dictionary’s following page as “a dirty woman,” with *sluttish* defined in paramoralistic terms as “nasty, not nice, not cleanly, dirty.”)

It seems clear that the child for whom these phrases came to mind when contemplating the stems SER, SET, SKI, SLA, SLO, and SLU was familiar with some of the major dimensions of American slavery. But slavery is not the subject of either critique or defense here: it is simply present. When I show this text to students, the routine appearance of slavery alongside mundane inscriptions like “it is SAToday” makes

Figure 8.

them uncomfortable: they want to see slavery clearly marked as distinct and extraordinary and obviously different from other forms of power. This text doesn’t do that. It evokes slavery among a variety of other asymmetrical power relationships backed by the threat of violence. It registers an unfair world, which might otherwise be called “childhood,” in which people are routinely hungry, scared, hurt, surveilled, and punished. Part of what the text suggests is how one person might have made sense of slavery as an institution at one extreme of, but not discontinuous with, normal human relations. That person might have been a southerner or a northerner, white or black, a slaveholder or a slave. Perhaps it was a white child in a slaveholding family, echoing phrases she heard her parents use in addressing their slaves, or words she herself used. Perhaps it was a child without firsthand experience of slavery who gained access to slavery’s conceptual vocabulary through literature and political discourse. Or perhaps the writer was herself a slave—a child or an adult, female or male—articulating the discursive contours of her own enslavement. After all, slaves occasionally learned to read and write using the discarded or hand-me-down texts of white pedagogy, as this dictionary could have been.⁶

I can’t see a way to decide among these alternatives. But all of them raise intriguing interpretive possibilities about the text’s succinct directive to “see the REBble.” Who is the rebel? This sentence might trace a northern child’s awareness of the American Civil War, a white southern child’s vigilance against the threat of slave rebellion, or an enslaved person’s familiarity with a slave rebel such as Nat Turner. It might rehearse a line from an 1803 poem celebrating the suppression of an Irish insurrection (“See! the Rebel horde disperses”) or an eighteenth-century hymn about the prodigal son (“Now see the Rebel raise his eyes”).⁷ The dictionary itself pejoratively defines a rebel as “one who opposes lawful authority.” Yet that official line doesn’t fully account for a text that tests

the limits of a subordinate's disempowerment, dragging its feet as it responds to an order ("SALly come here . . . SALly I say come here") and overtly resisting authority at least twice ("do not PUNish me," "QUIs me not"). The very act of taking pencil in hand to write back to the disciplining word is, itself, rebellious. In the end, the handwritten text is nearly as fragmentary and partial as the word stems it's built out of, and maybe it's the same kind of cipher: with a text as fragmentary as this, we all see what we want to see.

I want to see the rebel—the readerly rebellion against reading the book as it's meant to be read, or even the readerly rebellion against reading the book at all, as opposed to writing in it, drawing pictures in it, storing objects in it. I don't believe in the value of "reading" per se. I believe in the value—the historiographical and moral value—of active engagement with language, but that engagement frequently takes forms other than reading. I like to see readers taking what they're given and doing their own thing with it, the way the annotations in this book co-opt official print and turn it to another purpose. Even the most authoritative books do not get to decide how they are used, but are more or less easily drafted into practices other than what they were designed for. This child refused to go in the direction the dictionary wanted to take her, which was toward definition, certitude, and alphabetical order. She went somewhere else. I like this, because it reminds me that I have that same right of resistance to use texts in a way that doesn't lead me toward definition and certitude. Texts are about communication, and one thing I can do is listen to what they have to say and try to arrive at a clear understanding of what that is. But certainty forecloses possibilities, and texts are also about ambiguity and the unknowable. This dictionary's rebellious reader-writer reminds me of what is easily forgotten along the disciplinary straight-and-narrow: that as much as texts are for drawing conclusions and making arguments, they are also for hazarding guesses, telling stories, peering into possibilities, playing with what might be.
