Dear Mike,

I have completed the XRF analysis of the single flake specimen associated with Burial #2 in Feature 153 of Area 5 at Picuris Pueblo. Analytical conditions were identical to those discussed in the previous report on the Picuris assemblage. Results for this specimen, assigned analytical ID “PIC1397” are appended in a table below, and suggest that the piece is of the Obsidian Ridge/Rabbit Mountain (aka Cerro Toledo) material from the Jemez Mountains to the south of Picuris.

I have added these data to the rest of the Picuris database, and uploaded a copy of this to the shared drive on Box.

Sincerely,

[Signature]
