tially where Texas route 137 now crosses north of Iraan. Rand, McNa11ey, 1891; Reconnaissance Soil Survey, South Central Texas Sheet, 1913.

Rezaca. Cameron County. Evidently Resaca [or Rezaca] de la Palma, the site of the noted battlefield; about 5 miles northwest of Brownsville, according to Colton (1882).

Saragosa [Saragossa]. Reeves County. The “long route” (to Fort Davis) mentioned by Nealley went from Fort Stockton west a few miles to Leon Spring, then almost directly to Saragosa and thence southward. The road is shown on Sketch No. VII, of a series of “Surveys Western Texas 1883-4,” in the Library of Congress.

Screwbean. Reeves County. See pages 76ff for discussion.

Seminole Camp. Not located; presumably Brewster County; see page 78.

Seminole Cave. ValVerde County. Seven miles west of Comstock, according to Nealley.

A Supplementary Gazetteer of Texas, 1875-1895

Bessie Teeple Geiser

(With a Foreword by Dr. L. H. Shinners)

FOREWORD

Sixty-five years ago the compilers of the great Index Kewensis, a list of all the species of flowering plants which had been named up to that time, were content to state for most of those from the North American continent, merely that they were inhabitants of “Am. Bor.” Texas was signally honored, being adjudged of such great botanical interest that it was mentioned on a par with “Am. Bor.” as the native place of hundreds of plants. But even this relative exactitude is far
too little for the present day systematic botanist, who knows that close relatives may be found within the boundaries of so large an area as that of Texas, but inhabit different soils, or characterize different geological formations, or flower at different seasons. Or some may now be found in places into which they have been spread in recent times, or may have disappeared from places in which they were found by early collectors. It becomes a matter of concern, in attempting to gain a full and accurate knowledge of plant species, to know with considerable precision where were made those collections of earlier botanists which are the only dependable record of the place or limits of occurrence of plants in former years. Above all it is important to know with exactitude the localities of collections from which were drawn the descriptions of species new to science, the types on which the modern systematist, with better and fuller knowledge at his disposal, must still depend for the correct application of the names he uses.

The neglect and indifference of early botanists with regard to the places from which their collections came are sins which their botanical descendants, down to the third and fourth and fifth generation (and no one knows how many more), must expiate with much troublesome and vexatious searching through old records, to amplify and verify insufficient or questionable or merely unfamiliar place data. Botanical collectors seem to have had a marked predilection for very small, obscure and short-lived towns near which to make their collections. All too frequently the systematist attempting to prepare an up-to-date summary of a particular group of plants will find that an all-important type locality is wholly unknown as far as the standard reference works can show. It is not often that he can then turn to a supplementary source, and find that much patient, tedious labor has been done for him. Botanists will find they have good cause to be grateful to Mrs. Geiser for the preparation of the following list of Texas towns not found on standard maps or listed in standard guides, which were in existence during many of the years of activity of such collectors as Julien Reverchon, Dr. Edward Palmer, G. C. Nealley, A. A. Heller, J. E. Bodin, V. Havard, and G. Jermy. And, since no historical studies of any kind can help concerning themselves with places, there is no question that the list will prove of value to others as well.
Preface

The present list of early towns of Texas, in existence during the years 1875 to 1895, is supplementary to the extended one given in the current issue of The Texas Almanac. It is designed particularly for the use of botanical taxonomists, who from time to time encounter on herbarium sheets localities which cannot be found in any of the standard gazetteers, such as Steinwehr’s Centennial Gazetteer of the United States (1874), the various issues of Lippincott’s great work, Rand-McNally’s Commercial Atlas of the United States, and other similar publications. Henry Gannett, in the second edition of his A Gazetteer of Texas (1904) has listed many of the towns included, but numerous errors have crept into his work—some owing to subsequent county-boundary changes in many parts of Texas, and some due to manuscript errors in county names. I have therefore included his names, also, making corrections when they are in error. No names are included in this list which are to be found in the current Texas Almanac list.

I have been encouraged in this compilation by the cordial reception botanists have given to Professor S. W. Geiser’s 1944 work of a similar character, which includes names of “lost towns and ghost towns” of Texas that were in existence from 1840 to 1880. From railroad time-tables of the period, from county maps, and from other available sources, I have collated such names as are missing from present-day gazetteers. I have listed names with counties to which the towns were originally ascribed. Thus, “Antelope Gap,” near present Scallorn, originally ascribed to Mills County, I have corrected

1 The Texas Almanac, 1945-46, edited by Stuart McGregor, and published by the Dallas Morning News (608 p., cloth $1.00) is an indispensable handbook of Texas. It is published biennially. At pp. 111-28 of the current issue is included an almost complete list (about 3700 names) of present cities, towns, and villages of Texas.

2 Samuel Wood Geiser, “Ghost-towns and lost-towns of Texas, 1840-1880” (Texas Geographic Magazine, vol. 8, pp. 9-20, 1944.)

3 No list of early towns of Texas can well hope to be complete. While reading proof of this paper, I consulted, in difficulties, some 220 U.S.G.S. Topographic Sheets of Texas (which cover only a fraction of the State). In the four sheets which cover Travis County, I encountered the following mapped towns. (I have printed in SMALL CAPS towns listed in the current Texas Almanac; in italics, towns listed in the present work; and in plain Roman, those listed in neither, which have not been encountered either in botanical literature, or on the early maps.) The list follows: Anderson Mill, Austin, Bee Caves, Bluff Springs, Carl, Cedar Valley, Creedmoor, Deatsville, Delvalle, Dessau, Dunlap, Elysium (on Bastrop County line), Evelyn, Fiskville, Fort Prairie, Friendship Church, Garfield, Gregg, Hornsby (?Hornsby Bend), Hunter, Kouns, Lakewood, Littig, Lund, Manchaca, Manchac Springs, Manor, Manor’s Store, Merritstown, Montopolis, Moore & Berry’s Store (?MOORE’S CROSSING), Nameless, New Sweden, Pecan Springs, Pflugerville, St. Edward’s College, St. Elmo, Santa Monica, Spanish Oak Church, Sieder Springs, Spicewood Spring, Sprinkle, Volente, Watters, Webberville. This will give some idea of the inclusiveness of the Texas Almanac list, and the degree of its supplementation by the present one.
to present Lampasas County; "Sanderson, Pecos County" is corrected to present Terrell County; "Huelster, Reeves County" is placed in present Jeff Davis County, etc. Persistent errors of spelling, or slight changes in town names, are also corrected in the present list. Thus, "Brookland" is corrected to Brookeland, "Bruce" to Bruceville, "Colorado" to Colorado City, "West City" to West, "Kiomatia" to Kiomatic, "Moores Station" to Moore, "Patterson" to Pattison, "Tres Palacios" to Palacios, etc. When not certain of a given identification, I have indicated this uncertainty by a query-mark. When a town is on the border-line between two counties, I have hyphenated the two counties; and in such rare cases as where a town (like Ideal) is at the intersection of four counties, I have indicated all four counties. This will indicate to botanists caution in ascribing plants with such a locality to any given county, as the plants may really have been collected in another county than the one to which the usual gazetteers ascribe the town. When several Texas counties in the 1875-1895 period had towns of the same name, I have indicated this, but have not included counties whose town-names date from 1895.

In parentheses after the name, I have often given the name of a near-by existing town, to aid in briefly locating the former town. (Thus "Oasis, Dallas" and "Carruth, Dallas" [which, incidentally, refer to the same stop on the T.&N.O. (S.P.) R.R. north of Dallas] are indicated as near Vickery. As a matter of fact, they are now at the eastern border of University Park, and about a mile from Vickery—the nearest independent corporation in the popular mind.) Some 454 extinct towns and settlements are thus indicated. I am indebted to Dr. S. W. Geiser for these identifications.

The present list includes some 1958 primary and 306 secondary entries. In this work I have had, and gratefully acknowledge, the constant help and encouragement of Professor Geiser, whose manuscript historical gazetteer of Texas (now comprising several thousand cards) will probably not be completed for publication for several years.

I hope that the list may be of sufficient use to taxonomic botanists and students of Texas history to justify its present publication.

Jacob Boll’s Collecting in the Texas Permian: A Note and a Correction

S. W. Geiser

Dr. A. S. Romer in a recent note has written on collecting vertebrate fossils in the Texas “Red Beds.” In his paper, Romer states that the year 1946 is the seventy-fifth anniversary of the beginning of vertebrate-fossil collecting in the Permian of north-central Texas; and bases his statement on a small Permian reptile bone (which turned up in the Museum of Comparative Zoology a few years ago) with a label in Jacob Boll’s handwriting, “Beaver Creek, 50 miles north of Fort Belknap, Texas, 1871.”

I have been much interested in Romer’s note because of my own extensive studies on Boll’s life and explorations in Texas. Boll certainly did collect in the Texas Red Beds before E. D. Cope first visited Dallas in the summer of 1877 at the conclusion of the Nashville Meeting of the A.A.A.S. (not during the winter of 1877, as Romer states). I suspect at the outset that the “1871” of the label Romer saw is really an “1877,” in which Boll failed to cross-strike the second seven (which in Germanic writing is singularly like the figure “1,” and hence is usually differentiated by a cross-stroke through the stem of the “7”). Boll was often absent-minded and forgetful of details, though very accurate in matters that seemed to him important.

But there is no justification in disposing of Romer’s contention on such a priori grounds; I have, therefore, checked over
