INTRODUCTION: A MOVEMENT AND ITS CRITICS

In 1985, in the pages of *Wisconsin Law Review*, four co-authors and I warned that alternative dispute resolution (ADR), then a relatively young movement undergoing explosive growth, was likely to disfavor minorities, women, and members of other disempowered groups, particularly when their adversary was a corporation, a white person, or an authority figure of some kind. Coming on the heels of a famous article by Owen Fiss, the article attracted considerable attention, in part because it ran counter to the dominant ideology.

That ideology saw alternative dispute resolution as a welcome antidote to the expensive, anxiety-inducing, and time-consuming nature of formal, in-court adjudication that often left even the victor with mixed feelings about his or her experience. Mediation and arbitration, by contrast, appeared to offer friendlier, more humane ways of resolving disputes in which the parties could sit around a comfortable table in a small room talking amicably. No judge sat on high, scowling and issuing incomprehensible edicts (called “rulings”), with little if any accompanying explanation.

The parties could tell their stories in ways that seemed natural to them, without constant interruption in the form of objections or whispered conferences between the lawyers at the judge’s bench. The mediator or arbitrator would try to help the parties understand each other’s position and craft a solution that would give each at least a portion of what they wanted. At the conclusion, everyone would leave satisfied that justice was done—or, if not, that at least they got to tell their story and have the others listen. ADR was not only cheaper and faster than ordinary litigation, it was likely to leave the parties on better terms than the ones they would have enjoyed following a winner-take-all judgment of a court.

I. FAIRNESS AND FORMALITY

How could one find fault with a system like that?

One could, we argued. Known as the “fairness and formality” critique, or confrontation theory for confining prejudice, our challenge began by harkening back to Gunnar Myrdal and other prominent social scientists who observed that many Americans behave as though they were ambivalent—of two minds—about race. Our national ideals and founding documents hold that all persons are equal, cherished moral agents in the eyes of God. But because of our history, most Americans also subscribe, if only unconsciously, to a second, lower set of values and practices that they exhibit during moments of intimacy such as with friends or at a pub. On occasions like these, when no one else is looking, many Ameri-

cans are much more likely to tell a racist story or sexist joke or take action that will hurt the chances of a minority or a woman.14

On official occasions, such as a Fourth of July parade, with the bands playing and flags flying, most Americans will act according to their higher, official values.15 If they find themselves standing next to an African American or a person whom they know to be gay, they are apt to smile, put an arm around the person’s shoulder, and say, “Isn’t the parade grand?” Afterward, they may invite him or her to a barbecue in their back yard.16 This observation dates back to Myrdal’s *An American Dilemma*, if not further.17

By the same token, the theory holds, jurors and other participants in a courtroom drama are apt to behave with scrupulous fairness, following the judge’s instructions to the letter. The physical arrangements of the courtroom, with the robed judge sitting on high, the state or national flag on prominent display, the blindfolded lady of justice in full view, and the uniformed bailiff standing at the ready, remind everyone that this is an occasion on which they are expected to act in accord with the American Creed.18 Studies of jury behavior show that even prejudiced jurors often find it within themselves to do so.19

Alternative dispute resolution offers few such cues. The comfortable setting and informal atmosphere instead provide an ideal situation for a more empowered actor to behave in his usual confident fashion and to expect the mediator to enact his wishes as well.20 He will speak forthrightly as though his account of the matter is the only possible one.21 His body language and manner will suggest that he expects to win. A female or minority adversary is apt to sense the prevailing atmosphere and its familiar expectations and not put their case forward as confidently as they might otherwise.22

For social scientists, this “confrontation” or fairness-and-formality hypothesis explains why desegregation came about with so little resistance in the United States military following President Truman’s executive order. It also explains why minorities often find government jobs and sports, where civil service rules and athletic conventions dictate what can be done and how success is measured, attractive. And, it explains why they often do comparatively poorly in alternative dispute resolution.

Accordingly, we theorized that divorcing women who opted for mediated rather than litigated divorce would obtain lower alimony and child support awards than those they would have received had they proceeded in court. We also posited that the same would hold true for consumers or employees who agreed to submit claims to arbitration as well as persons charged with crime who opted for restorative justice instead of judicial disposition of the charges against them.

III. THE SPECIAL CASE OF SMALL-PRINT ARBITRATION CLAUSES

Large corporations, in particular, found mandatory arbitration particularly attractive in limiting their liability for defective products, dangerous drugs, or services that did not deliver as promised.\textsuperscript{36} A series

in the New York Times showed how, by inserting agreement-to-arbitrate clauses in a host of settings, ranging from auto sales, student loans, and marketing of various products and services, corporations sharply reduced their exposure and practically eliminated class actions. The series also showed how the practice began at a meeting of high-powered defense attorneys from several large corporations at which they came up with the strategy. Beginning around 2010, the practice of incorporating agreement-to-arbitrate clauses in agreements setting up a relationship spread like wildfire to literally dozens of areas so that no citizen is likely to go through a single day without using a product, app, or service that, if it backfires and causes an injury or disappointment, will require the purchaser to submit the claim to arbitration, not a court.

IV. VULNERABILITY—A DOUBLE-EDGED SWORD

How did corporations hit upon this strategy? A few commentators posited that small-stakes cases such as divorce mediation may have supplied a natural experiment that gave big-firm lawyers a hint of what might be possible. Our warning in the Wisconsin Law Review may have put them on notice, as well. When we suggested that the disadvantage that ADR imposed on weaker disputants was structural in nature and unlikely to go away even with better mediator training, the light bulb went on. Corporations realized that arbitration would enable them to win big.

If so, this feature offers a lesson for minority disputants and their defenders, namely that they pay close attention to the work of scholars such as Martha Fineman who draw attention to vulnerability as a touchstone.
These scholars highlight how focusing on this quality can avoid some of the shoals of traditional analysis, for example under the equal protection clause, with its many tiers of review and requirements of state action, intent, and straight-line causation. If a group, such as African Americans or undocumented immigrants, requires heightened judicial scrutiny, these scholars ask, why not protect them using the very feature—their vulnerability—that calls for judicial solicitude?

This approach avoids line-drawing problems as well as the charges of reverse racism that often follow the decision to distribute a coveted good, such as a seat in a famous university, to a minority at the expense of an equally deserving white. Administrators adopting vulnerability as a criterion would protect all those who are in need of special consideration at this point in their lives. Line-drawing problems would recede since most types of vulnerability are readily recognizable. One is either weak—ill, young, disabled, or of minority race and lacking in resilience—or not. And, as mentioned, few people are likely to envy the vulnerable, believe that they are getting away with something, and deem themselves virtuous when they organize to deprive them of an undeserved handout.

As impressive as those arguments are, bringing vulnerability to broad attention can backfire. That feature can elicit two responses, not just one. Pointing out that Jones is susceptible can motivate sympathetic onlookers imbued with empathic impulses (social worker types) to rush to his or her aid. A child teeters on a precipice; everyone rushes to guide it to safety.

44. Anchoring, supra note 42 (noting that vulnerability—the absence of resilience—does not reside in fixed groups such as the disabled or immigrant children. Instead, it arises from an interaction between individuals and the surroundings in which they find themselves at a particular moment in their life cycle.).

52. See Prosser, supra note 51.
But not always. As with barnyard chickens with a speck of blood that end up pecked to death by their yard-mates, the sight of vulnerability can elicit an aggressive response.53 We all know how schoolyard bullies can pick on a slightly built child or one with crossed eyes or a funny name or accent.54 Large nations can attack small, weak ones, unless, like Switzerland, they are bristling with underground artillery and citizens who keep military rifles at home in case of an invasion.55 Corporate raiders look for slim pickings for their next hostile takeover.56 Gimlet-eyed defense lawyers, some of whose high-salaried male friends have gone through mediated divorce and done well at it, apply the lessons learned in that setting to their defense planning at work.57

V. MANDATORY ARBITRATION: EXPLAINING THE INCREASE

In short, something like the following sequence of events occurred. Mediation, especially the divorce kind, turned out to be enjoyable, especially for the mediator class, enabling them to believe they were doing good work.58 Even their clients claimed to like it, especially the women: It allowed them to tell their stories.59 Satisfaction ran high, even though the results were, as they say, sub-optimal. Men noticed all this and passed the word on to others, including corporate defense counsel. Consent-to-arbitration clauses took off, saving corporate America billions over the next two decades60 and leaving consumers with little recourse when they were cheated or injured by defective products. The Supreme Court

blessed arbitration in a series of decisions.\textsuperscript{61} Inequality increased.

Since then, the relationship between formality and fairness has become less clear-cut than it was when we first wrote, with formality no longer so clearly superior for weaker parties.\textsuperscript{62} Still, well-heeled actors, particularly large corporations, have continued to flock to ADR, just as couples flocked to divorce mediation in the early days despite warnings of the process dangers it harbored for women.

Elsewhere, I expand on the connection between vulnerability and reform, employing a prize-winning film, \textit{The Unbearable Lightness of Being}, starring Daniel-Day Lewis and Juliette Binoche,\textsuperscript{63} as a vehicle to show how issuing a warning can alert bystanders to come to the aid of an endangered group. But it can also notify predators of easy prey, as happened with Binoche’s character, Tereza, an amateur photographer.\textsuperscript{64}

Instead, I offer here a few remarks aimed at framing the debate about deformed disputing in light of social currents, including growing inequality. As will be seen, if large forces are inexorably pressing society in that direction, efforts on behalf of procedural reform will stand little chance of success without conscious efforts to counteract them.\textsuperscript{65} Otherwise, procedural reformers could easily find themselves playing minor parts in a second natural experiment carried out by the strong.\textsuperscript{66}

\begin{itemize}
\item \textsuperscript{61} See AT&T Mobility v. Concepcion, 563 U.S. 333 (2011) (upholding a fine-print contract that obliged consumers to arbitrate cases one by one); American Express v. Italian Colors Restaurant, 133 S. Ct. 2304 (2013) (same).
\item \textsuperscript{62} In particular, procedural formality may no longer be the sure guarantor of fairness of outcome that it once was. The reason is that not all national creeds include racial fairness. For example, in South Africa during Apartheid, the official values were overtly racist. The national regime oppressed blacks and treated them as second-class citizens. There, a black with a broken-down car could hope for kindly treatment from a passing motorist or pedestrian more readily than from a representative of the official regime. The same was true in the American South during slavery and Jim Crow. An occasional white southerner might extend blacks a helping hand in situations where the authorities were unlikely to do so. The relationship between fairness and formality, in short, is contingent and varies over time and from place to place. What is the situation in the U.S. today? Our society now embraces official neglect (“colorblindness”) and worries more about reverse racism and quotas than relieving historical injustice. We deport Latinos, bar Muslims from entry, and tell Blacks that affirmative action’s days are numbered. In short, we may well be approaching a point where, as in South Africa, a disempowered minority citizen may hope for better treatment from an informal source than from an official one—a magistrate or judge enforcing brutally cool, uncaring laws.

A. Procedure for the One Percent

Four current trends, two of a legal nature, and two societal, reinforce the movement toward alternative dispute resolution and away from the judicial kind.

1. First is increasing inequality. Thomas Piketty and others have been calling attention to the growing gap between the top one percent in society and all the rest.67 Piketty and, before him, Marx, believed this tendency inherent in corporate capitalism, at least unless a society makes strenuous efforts to counter it, as some European countries have done.68 But in the U.S., we have, wittingly or not, accelerated the growing gap by changes in the tax code,69 deregulation of all kinds,70 federalism,71 and weakening of unions72—all moves toward reduced protection for relatively disempowered groups.

2. By the same token, our society offers less upward mobility than other developed countries do.73 We have a weaker public safety net,74 a more regressive tax code,75 and poorer quality public schools.76 Despite our self-image as a nation of Horatio Algers, the chances for a child born into the bottom quintile of ending life anywhere near the top are miniscule.77 Both features—increasing inequality and little upward mobility—mean that a concerted effort to replace formalized dispute resolution with the traditional, in-court kind would confront a tide running in the oppo-

site direction.\textsuperscript{78} Formal, in-court proceedings are expensive, a social welfare benefit that we provide and subsidize in order to enable the poor to secure their rights.\textsuperscript{79} And the outcomes it provides are apt to be more favorable than those a weaker disputant is apt to achieve in a mediated or arbitrated proceeding.\textsuperscript{80}

3. \textit{Changes in substantive law} give further evidence of that tide. Our society has recently imposed tort caps,\textsuperscript{81} proposed eliminating fiduciary rules for financial advisors,\textsuperscript{82} and imposed barriers to recovery for medical malpractice.\textsuperscript{83} Each of these measures likewise contributes to a climate in which reform is difficult to achieve—or even imagine—because it runs against the tide. With liability capped, for example, why not relegate an injured consumer to an informal setting, where she and her opponent can haggle over a comparatively small sum?

4. \textit{Changes in procedural law} show the same trend. Plausibility pleading,\textsuperscript{84} cutbacks in class actions and summary judgment,\textsuperscript{85} and heightened standing rules\textsuperscript{86} all make civil courts a less promising avenue for the injured citizen or consumer than they were formerly. And \textit{Citizens United}\textsuperscript{87} and \textit{Shelby County v. Holder}\textsuperscript{88} make it harder for citizens to achieve reform through the political process. All these changes contribute to a climate that makes “second class treatment for second class litigants” seem fitting and natural.

All these developments enable the haves to strengthen and consolidate their position vis-à-vis the have-nots. They also enable them to put in

place further practices and rules favoring themselves, each of which, at the time, seems natural and just.89

B. EXPLAINING HEGEMONIC PROCEDURE

What explains this cycle, and why is it happening in each of these sectors—politics, procedure, substantive law—at roughly the same time? Consider three underlying forces that contribute to it:

1) Global warming. In two books and an essay in the New York Times,90 Naomi Klein warns that global climate change will raise water levels in all the oceans, flooding many coastal regions.91 At the same time, it will produce famines and prompt hordes of desperate immigrants to seek shelter in wealthier countries.92 The rich see these shifts coming and are beginning to take measures to assure safety in the times ahead.

The author of a book on conservative money and influence93 notes that a dystopian novel, Camp of the Saints,94 is beginning to make new rounds in alt-right and white supremacist circles.95 In the novel, Europe is threatened by a rising tide of desperate, dark-skinned people seeking refuge from war and famine.96 It recounts the struggle of white civilization (France) to save itself from the threat of engulfment by dark hordes from backward countries.97 In our day, mainstream newspapers are raising the

89. See the “many doors” critique of ADR, which made disputant choice the decisive factor for determining whether a formal or informal dispute procedure was in order. E.g., Judith Resnik, Many Doors? Closing Doors? Alternative Dispute Resolution and Adjudication, 10 OHIO ST. J. DISP. RESOL. 211 (1995); Jeffrey W. 2) A second source of anxiety in elite circles is fear of an upcoming demographic shift as the population of the United States approaches a tipping point, around year 2042, when the number of minorities will exceed that of whites, and the nation will cease to be a majority-white state.\textsuperscript{100} California, whose numbers are now close to that point, recently underwent a series of shocks and adjustments as the dominant group fought to preserve its position in the face of the upcoming shift.\textsuperscript{101} A number of highly placed academics, White House spokesmen, and political operatives believe that this is true of the country at large and that we are in the early stages of a cultural showdown.\textsuperscript{102}

3) A third force is reaction to the Sixties and its counterculture of drugs, freedom, and anti-authoritarian attitudes.\textsuperscript{103} Many senior leaders today were young during this formative period and, unlike their more experimentally-minded counterparts, reacted against the currents that were roiling American society, studied hard, and bade their time. Some of the unrest spreading across the country today in the form of immigration marches, anti-Trump protests, and Black Lives Matter may remind them of the horrors of their youth. Now, however, having risen to high levels in

think tanks and government, they are in a position to do something about them.104

CONCLUSION: WHY PROCEDURE IS BECOMING LESS OPEN

Could these currents explain deormalization and some of the other legal changes mentioned above? Perhaps not directly, but large issues have a way of filtering down to actors like the judges on the Ninth Circuit who ruled against Donald Trump’s first immigration ban105—as well, I suggest, to procedure specialists who might ignore those currents at their peril. As recently as February 2017, the nation received a lesson in how ignoring the big picture was a new president’s error in the Ninth Circuit. He thought he could set the country right by enacting a ban on Muslim immigration. But a three-panel court of appeal instead saw his action in light of constitutional doctrine and history.106

Creating procedural rules that are both equitable and accessible is a vital task. But if our system of civil procedure is to offer a fair and just forum for the resolution of disputes, we will need to pay attention to the rise of deormalization among many shifts that favor well-heeled actors at the expense of the less powerful. This, in turn, will require attention to resurging inequality and the many measures that its defenders are putting into place, not merely in procedural law but across the board.
