A JOKE PRESENTLY making the rounds in the general aviation industry is that if the airplane flown by the Wright brothers at Kitty Hawk was still flying today, Orville and Wilbur would still be responsible for it under today’s general aviation product liability laws.\(^1\) This attempt at humor is indicative of the current state of the general aviation industry. Since the industry’s boom times in the late 1970s, general aircraft delivery has dropped from 18,000 units delivered in 1978 to 1143 units delivered in 1988.\(^2\)

Although not entirely to blame, a fair share of this decline is attributable to the increase in the cost of accident liability insurance.\(^3\) Industry wide liability insurance costs in 1985 were $210 million, an increase of almost nine

\(^2\) Id. at 16, col. 3.

895
times over the 1978 costs. This increase in liability insurance has completely driven some manufacturers from the market, while others have dropped liability insurance altogether, opting for self insurance. Still others are forced to carry only an excess liability policy.

In an effort to alleviate this problem, both houses of Congress introduced bills in the 101st Congress to provide uniform liability standards for general aviation accidents. Senate Bill 640 was introduced by Senator

---

5 Beech Aircraft estimates that its cost for insurance per unit delivered is $80,000. This does not include the cost of insurance incurred by manufacturers of components included in the cost of the component delivered to Beech, which is estimated to be an additional $25,000 per unit delivered. Statement of Martin, supra note 4. Russ Meyer, Chairman of Cessna Aircraft estimates that the cost of liability insurance on an $80,000 airplane would be between $40,000 and $50,000. Bradley, Cessna's Skies Turning Blue After Poor '80s, Wichita Bus. J., Aug. 21, 1989, at 24, col. 3.

6 Cessna Aircraft Company once bragged of "teaching the world to fly." Today it no longer manufactures single-engine, piston aircraft, largely due to the cost of liability insurance. According to Russ Meyer, Chairman of Cessna, "[w]e'd like nothing better [than to re-enter the piston driven general aviation market], but if nothing changes with respect to product liability costs, it is unlikely that we will build the piston airplanes." Cessna now concentrates on the business jet market.

7 When Stuart Millar purchased Piper Aircraft in May 1987, one of the first things he did was drop liability insurance. Against the Law, The Economist, June 10, 1989, at 66. Piper now fights every claim considered unjustified with a team of lawyers that has been described as having the disposition of a "junkyard" dog. Id. If Piper is hit with a massive liability judgment, Mr. Millar has resigned himself to turning the keys to the company over to the winner. Piper May Still Be Carrying Excess Baggage, Bus. Week, June 12, 1989, at 76.

8 Beech Aircraft has what amounts to a $50 million deductible for product liability claims. Bradley, supra note 1, at 16, col. 4. General liability insurance covers the insured for claims up to its policy limit. Most general liability policies include a deductible for a specified amount of liability for which the insured is itself responsible. Excess liability coverage is a separate policy which covers the insured for claims in excess of the general liability policy limits. Self insurance consists of the insured insuring itself for claims up to a certain amount, usually significantly higher than a typical deductible. Often self insurance and excess liability coverage work together to protect an insured. See generally C. Kulp & J. Hall, Casualty Insurance (1968).

9 Similar bills were introduced in two prior sessions of Congress. Bradley, supra
Kassebaum on March 16, 1989, while House Bill 1307 (the Act) was introduced by Representative Glickman on March 8, 1989. The stated purpose of this legislation is to "establish rules of Federal law for determining personal injury and property damage arising out of general aviation accidents."

This comment will analyze and discuss the impact the Act will have on existing law in the area of general aviation accidents.

I. OVERVIEW OF THE ACT

The scope of the Act is limited exclusively to accidents involving general aviation aircraft. The Act defines general aviation aircraft as aircraft which have a maximum seating capacity of less than 20 people and are not currently used in scheduled passenger carrying operations.

---

note 1, at 13, col. 1. In the 100th Congress, the Senate bill went as far as the floor of the Senate before it was killed by filibuster, while the House bill was killed in committee. Id. at 16, col. 3.

10 Republican, Kansas.

11 Democrat, Kansas.

12 S. 640, 101st Cong., 1st Sess. (1989); H.R. 1307, 101st Cong., 1st Sess., 1989). The bills are virtually identical. This comment will focus on H.R. 1307, with any material differences between the two noted as necessary. The Product Liability Reform Act, S. 1400, was also introduced during the 101st Congress. S. 1400 modifies product liability rules for all types of products, not only general aviation aircraft. S. 1400 differs from H.R. 1307 and S. 640 in three material respects: (1) everyone in the chain of causation is severally liable, no one is jointly liable; (2) a twenty-five year statute of repose only applies if the injured party is eligible under worker compensation rules; and (3) punitive damages against the manufacturer are generally not allowed in aviation accidents if the aircraft was FAA certified. S. 1400, 101st Cong., 2nd Sess., 135 CONG. REC. 8725 (1989).

13 H.R. 1307, supra note 12, § 2(b). The congressional findings included in the bill set out several major reasons why Congress believes the legislation is necessary. Specifically, (1) air transportation is an important component of the nation's transportation system; (2) the air transportation industry is highly regulated; (3) general aviation manufacturers and component part manufacturers are ceasing production due to increasing liability costs; and (4) while the number of injuries has declined, the amount of damages paid out in liability claims has increased tremendously. Id. § 2(a).

14 Id. § 721(a).

15 Id. § 732(3).

The term 'general aviation aircraft' means any aircraft for which a type certificate or any airworthiness certificate has been issued by the Administrator, which, at the time such certificate was originally is-
Since the Act is limited to general aviation aircraft, it will not impact liability arising from commercial air carrier accidents.

Furthermore, the Act will not exclude from liability any party potentially liable under current law. The Act applies to general aviation manufacturers, owners and operators of general aviation aircraft, or anyone that repairs, maintains, or provides any other support services for general aviation aircraft. A general aviation manufacturer is a manufacturer of the airframe or engine used in a general aviation aircraft or the manufacturer of any system, component, subassembly, or other part of a general aviation aircraft.

The Act sets out three broad standards on which liability may be premised: (1) negligence, (2) strict products liability, and (3) warranty. The negligence standard established by the Act is simply common law negligence. The Act provides that any person injured in a general aviation accident by the negligence of another, as long as the negligence is the proximate cause of the injury, may bring suit.

---

16 Id. § 721(a).

17 Id. The senate bill includes actions brought by occupants at the time of a general aviation accident and nonoccupants that are bringing an action on behalf of such occupants. S. 640, supra note 12, § 4(e).

18 H.R. 1307, supra note 12, § 732(4). "The term 'general aviation manufacturer' means —

(A) the builder or manufacturer of the airframe of a general aviation aircraft;
(B) the manufacturer of the engine of a general aviation aircraft; and
(C) the manufacturer of any system, component, subassembly, or other part of a general aviation aircraft." Id.
an action for liability.\textsuperscript{19}

Within the area of strict products liability, the Act makes two major changes to existing law. First, in order to hold a person liable for manufacturing or design defects, the product must have been defective at the time the product left the control of the manufacturer, as judged against the reasonably feasible design and engineering standards which existed at the time of manufacture.\textsuperscript{20} Second, the product must be used in a manner for which it was designed and manufactured.\textsuperscript{21} This second change precludes liability in situations where the aircraft was used in a manner for which it was not designed or manufactured, eliminating what is commonly known as the "crashworthiness" doctrine. The Act also codifies the requirements that a manufacturer warn consumers about dangers the manufacturer is aware of or reasonably should be aware of, either at the time of the sale or after the product is sold.\textsuperscript{22}

Finally, the Act also provides for liability in situations where an injury arises from a breach of an express warranty.\textsuperscript{23}

Other major provisions of the Act include the following: (1) establishing comparative liability in all general aviation accidents; (2) limiting the length of time, after the manufacture of the aircraft, in which an injured person can bring suit; (3) limiting the admissibility of evidence of any corrective measures made by the manufacturer which, if made before the accident, might have prevented the accident; (4) allowing punitive damages only in situations where the actions of the responsible party constituted a conscious and flagrant indifference for the safety of users of general aviation aircraft; and (5) placing concurrent jurisdiction of general aviation accidents with federal and

\textsuperscript{23} Id.
Not surprisingly, manufacturers are in support of the Act. Perhaps a little surprising is the fact that two consumer organizations, whose members stand to be injured by any limitations on liability, are also in support of the Act. These organizations are the Aircraft Owners and Pilots Association (AOPA) with over 280,000 members, and the National Business Aircraft Association (NBAA) with over 2900 member companies. Both AOPA and NBAA support the legislation because of their belief that it will decrease the cost of liability insurance coverage carried by manufacturers, which will, in turn, decrease the cost of aircraft and thus decrease the cost of flying to their members.

The strongest opposition to the Act comes from a seemingly unlikely opponent, the Association of Trial Lawyers of America (AOTLA). AOTLA bases its oppo-

25 Eberhart, Suits May Ground Small-Craft Makers: Air Accident Liability Limits Sought, Kansas City, Mo. Star, July 5, 1989, at 2C, col. 6; see also Statement of VonFlatern, supra note 3, at 71-75 (statement in support of the Act), and Statement of Martin, supra note 4, at 54 (statement in support of the Act).
28 Statement of Yodice, supra note 26, at 85; Statement of NBAA, supra note 27, at 100. The AOPA recognizes that its position in support of the Act is in dichotomy with the normal position that a consumer group advocates in this kind of situation.

On the one hand, we are the probable victims of any air crashes which are due to defective general aviation products. On the other hand, we have an interest in the availability, at reasonable cost, of general aviation products. It is apparent to us that many manufacturers and suppliers have curtailed production and others have gotten out of the general aviation business altogether, principally due to product liability concerns.

Statement of Yodice, supra note 26, at 85.
sition to the Act on several grounds: (1) the fact that tort reform historically has been a matter of state concern; (2) any incentive to improve aircraft crashworthiness is eliminated; (3) by establishing a statute of repose, manufacturers will be able to avoid liability in situations where their actions were clearly negligent; (4) the injection of negligence standards into strict liability; and, (5) the introduction of comparative negligence will prevent innocent victims from receiving full compensation.

II. LIABILITY STANDARDS

A. Negligence

The Act provides for recovery in a general aviation accident to an injured party if the injury is caused by the negligence of another and the negligence is the proximate cause of the injury. This negligence standard is the...
same standard applied in products liability actions in general, and is also the same standard currently utilized in aviation cases. To prove negligence in an aviation case, the plaintiff must show that the defendant owed a duty to the plaintiff, the defendant breached this duty, and the defendant's breach proximately caused an injury to the plaintiff. The breach may occur during the manufacture or design of the aircraft. As in other products liability negligence actions, privity between the manufacturer and the injured claimant is not required.

Carter Carburetor Corp. v. Riley, 186 F.2d 148 (8th Cir. 1951) (negligent manufacture of aircraft fuel pump); see also Restatement (Second) Of Torts § 395 (1964).

Vrooman v. Beech Aircraft Corp., 183 F.2d 479 (10th Cir. 1950) (foreseeability of the consequences creates the duty); Middleton v. United Aircraft Corp., 204 F. Supp. 856 (S.D.N.Y. 1960). A person without direct contractual relations to the manufacturer can recover for his negligence. The manufacturer should realize that in the ordinary course of events, persons other than the buyer will share the danger. Id. at 858. Since 1916, courts have used a foreseeability test. If the injury to the plaintiff was foreseeable, privity of contract between the plaintiff and the defendant is not necessary. MacPherson v. Buick Motor Co., 217 N.Y. 382, 111 N.E. 1050 (1916).
A classic example of negligence in an aviation case is found in *Northwest Airlines v. Glenn L. Martin Co.* In *Northwest Airlines*, a commercial airliner crashed as it approached Minneapolis, Minnesota during a thunderstorm. The subsequent investigation revealed that a wing spar, broken because of metal fatigue, caused the aircraft to crash. The airline brought an action against the manufacturer for negligent design and manufacture in the construction of the aircraft. The airline alleged that negligent design and construction of the wing spars made them unreasonably susceptible to metal fatigue and claimed that if the manufacturer had exercised due care, the accident would not have occurred. The Sixth Circuit held that the evidence presented a question of negligence which was properly submitted to the jury. The case, however, was ultimately remanded due to improper jury instructions regarding contributory negligence.

A manufacturer may also be liable for negligence in connection with the use of a component manufactured by someone else. In *Boeing Airplane Co. v. Brown*, an action for negligence was brought against the manufacturer of the aircraft. The cause of the accident was the failure of a component part manufactured by another party. The

court held that it was irrelevant that the part causing the accident was not manufactured by the manufacturer of the aircraft. The manufacturer "[is] chargeable with the duty to exercise reasonable care in the design and construction of the component . . . which is installed in its manufactured product."  

In an effort to reduce the plaintiff's burden of proof on negligence issues, some courts have allowed the use of the doctrine of res ipsa loquitur (res ipsa). Res ipsa may be used in some situations to draw the inference that the manufacturer was negligent in the manufacture of the aircraft. Before a plaintiff may use res ipsa, he must show: (1) that the alleged defect existed at the time the aircraft left the control of the manufacturer; (2) the defect would not ordinarily occur in the absence of negligence; and (3) the accident was not the result of the conduct of the plaintiff. The inherent difficulty in satisfying the first element of res ipsa proves to be the biggest obstacle for many plaintiffs. Proving that the defect existed at the time the air-

If Thompson [the manufacturer of the component] failed to exercise reasonable care in the design and manufacture of that component, or if Thompson or Boeing [the manufacturer of the aircraft] or both failed to exercise reasonable care in inspecting or testing the component, or if Boeing failed to exercise reasonable care in installing the component in the B-52 bomber or in warning the Air Force of any known defect therein, Boeing is liable for damage proximately caused thereby.

53 Id.

craft or component left the control of the manufacturer remains a significant burden.

The negligence standard set out in the Act makes no changes to the rules of negligence as they currently exist. Therefore, the negligence rules discussed above would continue unaffected if the Act becomes law.

B. Strict Liability

The Act also provides for recovery under a theory of strict liability in tort. This section of the Act contains two of the more controversial changes to the existing law. The first is the allowance of a “state of the art” defense. The other is the limitation of liability to only those situations where the aircraft was being used in the manner for which it was designed and manufactured.

The doctrine of strict liability was created to allow a plaintiff to recover against a manufacturer for a defective product without proving that the manufacturer engaged in culpable conduct. Today a majority of jurisdictions in the United States have adopted strict liability in tort. The doctrine of strict liability is embodied in Section 402A of the Restatement (Second) of Torts.

---

58 H.R. 1307, supra note 12, § 722(b).
Any person claiming damages for harm arising out of a general aviation accident may bring an action for damages against a general aviation manufacturer of a product and may recover damages from that general aviation manufacturer if:

(A) the product, when it left the control of the manufacturer, was in a defective condition unreasonably dangerous for its intended purpose, according to engineering and manufacturing practices which were reasonably feasible;

(B) the defective condition is a proximate cause of the claimant's harm; and

(C) the general aviation aircraft was being used at the time of the accident for a purpose and in a manner for which it was designed and manufactured.

59 Id. § 722(b)(1)(A).
60 Id. § 722(b)(1)(C).
63 RESTATEMENT (SECOND) OF TORTS § 402A (1964). "One who sells any prod-
In order to recover under current strict liability standards, the plaintiff bears the burden of showing the following: (1) the product was defective; (2) the defect existed at the time the product left the control of the manufacturer; (3) the defect was not contemplated by the user; (4) the defect made the product unreasonably dangerous; and (5) the injury to the plaintiff was caused by the defect.\textsuperscript{64} A product may be defective as the result of a manufacturing defect or a design defect.\textsuperscript{65} As in negligence cases, privity between the manufacturer and the user is not required.\textsuperscript{66}

Modern courts have spent a lot of time attempting to define the phrase "defective condition unreasonably dangerous" found in Section 402A.\textsuperscript{67} Some jurisdictions hold that the two parts of the phrase, "defective condition" and "unreasonably dangerous," are synonymous.\textsuperscript{68} Others believe that the two phrases establish two standards of proof: (1) the product is defective, and (2) the defect constitutes an unreasonable danger.\textsuperscript{69}

The initial approach adopted by a majority of the courts in determining the meaning of a "defective condition unreasonably dangerous" was a consumer expectation test

\textsuperscript{64} Manos, 324 F. Supp. at 484; see also Rigby v. Beech Aircraft Co., 548 F.2d 288 (10th Cir. 1977).
\textsuperscript{66} Manos, 324 F. Supp. at 483.
\textsuperscript{67} W. Turley, Aviation Litigation § 1.04 (1986).
\textsuperscript{68} Id.; see also Ross v. Up-Right, Inc., 402 F.2d 943 (5th Cir. 1968) (only requires unreasonably dangerous); Glass v. Ford Motor Co., 123 N.J. Super. 599, 304 A.2d 562 (Law Div. 1973) (product only required to be defective).
\textsuperscript{69} W. Turley, supra, note 67, § 1.04; see also Bruce v. Martin-Marietta Corp., 544 F.2d 442, 447 (10th Cir. 1976); Kleve v. General Motors Corp., 210 N.W.2d 568, 570-71 (Iowa 1973).
set out in the comment to the Restatement.\textsuperscript{70} Under this test, a defective condition is defined as a "condition not contemplated by the ultimate consumer, which will be unreasonably dangerous to him."\textsuperscript{71} "Unreasonably dangerous" is defined as "[t]he article sold must be dangerous to an extent beyond that which would be contemplated by the ordinary consumer who purchases it . . . ."\textsuperscript{72}

The Superior Court of Pennsylvania applied the consumer expectation test in \textit{Berkebile v. Brantly Helicopter Corp.},\textsuperscript{73} to determine whether a defect in a helicopter which prevented the pilot from using autorotation in case of engine failure was an unreasonably dangerous defective condition.\textsuperscript{74} The court held that the ordinary consumer would expect that in the case of engine failure, the pilot of the helicopter would have enough time to place the helicopter in autorotation in order to land without crashing.\textsuperscript{75} Since the design of the helicopter did not allow the use of autorotation as quickly as consumers would expect it to, this constituted an unreasonably dangerous defective condition.\textsuperscript{76}

The risk-utility test, originally adopted in the California case \textit{Barker v. Lull Engineering Co.}\textsuperscript{77} is another frequently used test to determine what constitutes an unreasonably dangerous defective product.\textsuperscript{78} This test considers whether the risk of harm from the product in its defective condition outweighs its utility. Factors considered by a court when weighing the risk versus the utility of the product include (1) the gravity of the danger; (2) the like-
lihood of the danger; (3) the cost and feasibility of a safer design; and (4), the adverse consequences of adopting the safer design.79

In Wilson v. Piper Aircraft Corp.,80 the Supreme Court of Oregon applied the risk-utility test to determine whether a carburetor which iced up upon entering a cloud was an unreasonably dangerous defect.81 The court realized that, in some situations, the remote probability of injury resulting from the design is outweighed by the utility of the product in the defective condition. As a result, the court held that the manufacturer was not responsible for any injury arising from the defect.82 The court also recognized that in certain situations a change in design which increases safety might nevertheless render the product's utility worthless. Under those situations, the manufacturer would likewise not be liable.83 The court ultimately reversed and remanded the case because there was no evidence of a safer alternative design which could support the lower court's finding against the manufacturer under a risk-utility theory.84

A minority of jurisdictions follow the pro-plaintiff California rule as set out in Cronin v. J.B.E. Olson Corp.85 The Cronin rule provides that a plaintiff is only required to show a defective condition proximately causing an injury.86 The plaintiff is not required to show that the defect made the product unreasonably dangerous.87 The Cronin court was concerned that proof of an unreasonably dangerous defect injects principles of negligence into

87 Id.
strict liability.\textsuperscript{88}

The introduction of "state of the art" into strict liability analysis under the Act provides an absolute defense for determining an unreasonably dangerous defective condition under the consumer expectation test and the risk-utility test.\textsuperscript{89}

Since a consumer can expect no more than "state of the art" at any given time, "state of the art" will always meet the consumer expectation test.\textsuperscript{90} A similar result is reached under the risk-utility test. When analyzing a defect under risk-utility, some courts consider whether any feasible, safer, alternatives exist.\textsuperscript{91} The term "state of the art" implies that the technique employed is the best way, currently feasible, to accomplish the desired result. If that is the case, there are no better alternatives. Thus, a manufacturer who can show that the method used was "state of the art" at the time the aircraft was manufactured will also satisfy the risk-utility test and avoid liability.\textsuperscript{92}

There is already considerable controversy surrounding the injection of the "state of the art" defense into strict liability.\textsuperscript{93} The controversy stems from the fact that "state of the art" injects negligence principles into strict liability,

\textsuperscript{88} Id. at 132, 501 P.2d at 1162, 104 Cal. Rptr. at 442. Requiring the plaintiff to prove an unreasonably dangerous defect "has burdened the plaintiff with an element that rings of negligence." Id.; see also McGee v. Cessna Aircraft Co., 82 Cal. App. 3d 1005, 147 Cal. Rptr. 694 (1978) (application of Cronin in an aviation liability case).

\textsuperscript{89} H.R. 1307, supra note 12, § 722(b)(1)(A).

\textsuperscript{90} "State of the art" can never be a defense in a manufacturing defect case because a manufacturing defect is a mistake made in the manufacturing process.

\textsuperscript{91} See supra notes 77-90 and accompanying text.

\textsuperscript{92} The "state of the art" defense does not need to be considered under the Cronin theory discussed earlier. The Act specifically provides that the product be "in a defective condition unreasonably dangerous" (the same standard as established in § 402A of the Restatement (Second) of Torts). Thus a court would be precluded from using the Cronin standard that a plaintiff merely has to show the product was defective and proximately caused the injury and not that the defect rendered the product unreasonably dangerous.

\textsuperscript{93} See Robb, A Practical Approach to Use of State of The Art Evidence in Strict Products Liability Cases, 77 Nw. U.L. Rev. 1, 9-13 (1982). The majority of the jurisdictions in the United States allow the admission of "state of the art" evidence as a factor to be considered in strict liability cases. W. Turley, supra note 67, § 2.15.
where the primary concern is not the amount of care exercised by the manufacturer but merely whether the product is defective.\textsuperscript{94}

In \textit{Bruce v. Martin-Marietta Corp.},\textsuperscript{95} the Tenth Circuit considered the "state of the art" defense in connection with the use of the consumer expectation test.\textsuperscript{96} The case arose from the crash of an aircraft that was eighteen years old.\textsuperscript{97} During the crash, seats broke loose from the floor and blocked the exit.\textsuperscript{98} A fire then broke out.\textsuperscript{99} A plaintiff's expert testified at trial that, at the time of the crash, there were seats in use in some aircraft that would not have broken loose and blocked the exit.\textsuperscript{100} The defense countered with evidence that the seats were "state of the art" technology as it existed in the year the aircraft was manufactured.\textsuperscript{101} The court held that the "state of the art" evidence helped determine the expectation of the consumer and since the plaintiff failed to present any contrary evidence as to the consumer's expectation, the "state of the art" evidence was properly admitted and considered by the trial court in granting summary judgment for the manufacturer.\textsuperscript{102}

The Act contemplates another major change to existing law under the doctrine of strict liability. The Act provides that before a manufacturer can be held responsible for an accident caused by a defective aircraft, the aircraft must

\textsuperscript{94}Robb, \textit{supra} note 93, at 9-13.
\textsuperscript{95}544 F.2d 442 (10th Cir. 1976).
\textsuperscript{96}Id. "State of the art" has also been considered under a risk-utility test. See McLaughlin \textit{v. Sikorsky Aircraft}, 148 Cal. App. 3d 203, 195 Cal. Rptr. 764 (1983). The court considered that among the relevant factors in applying the risk-utility test is whether any feasible alternatives exist. \textit{Id.} at 210, 195 Cal. Rptr. at 767. To determine whether any feasible alternatives exist, it seems reasonable that evidence as to whether the design was "state of the art" would be relevant. \textit{Id.} at 210, 195 Cal. Rptr. 767.

\textsuperscript{98}\textit{Id.}
\textsuperscript{99}\textit{Id.}
\textsuperscript{100}\textit{Id.} at 446.
\textsuperscript{101}\textit{Id.}
\textsuperscript{102}\textit{Id.} at 447. "A consumer would not expect a Model T to have the safety features which are incorporated in automobiles made today. The same expectation applies to airplanes." \textit{Id.}
have been in use "at the time of the accident for a purpose and in a manner for which it was designed and manufactured." This is known as "intended use." Since an aircraft crash is foreseeable, but definitely not intended, manufacturers have no duty under the Act to insure that their aircraft are "crashworthy." Predicking liability on whether the aircraft was being used in a manner intended at the time of the accident completely eliminates the crashworthiness doctrine.

The rule that manufacturers have a duty to construct their products to guard against foreseeable misuse by the consumer of the product was first established in Larsen v. General Motors Corp. In Larsen, the Eighth Circuit recognized that a manufacturer did not have a duty to build an accident-proof product, but that it does have a duty to use reasonable care in the design of an automobile to avoid subjecting the user to an unreasonable risk in the case of collision. The court rejected the narrow rule that the manufacturer is only responsible for an injury incurred while the automobile is being used in a manner for which it was designed and manufactured.

A majority of jurisdictions have adopted the crashworthiness doctrine originally established in Larsen. In Trust Corp. of Montana v. Piper Aircraft Corp., a United States district court applied the crashworthiness

103 H.R. 1307, supra note 12, § 722(b)(1)(C).
104 This is the rule in strict liability cases. Under the Act a manufacturer is liable for the crashworthiness of the aircraft if the manufacturer's actions constituted negligence. See supra notes 35-57 and accompanying text.

108 See W. Turley, supra note 67, § 1.15 (list of states that have adopted the crashworthiness doctrine).
doctrine to an aircraft manufacturer. The plaintiff alleged that his injuries incurred during the crash were aggravated by the defective design of the aircraft. The court stated that a manufacturer was not responsible for injuries resulting from the misuse of his product unless such misuse was foreseeable. The court went on to say that, like an automobile collision, an aircraft crash was foreseeable.

The introduction of "intended use" into strict liability under the Act completely eliminates the "crashworthiness" doctrine except in situations of negligence or express warranty. Thus, a plaintiff will be able to recover for injuries caused by the manufacturer's failure in connection with a secondary collision only if he can prove negligence or breach of warranty. Eliminating the "crashworthiness doctrine" in strict liability actions shifts the more onerous burden of proving negligence or breach of an express warranty back to the plaintiff, and thus returning plaintiffs to the same position they were in before the advent of strict liability.

C. Failure to Provide Adequate Warnings or Instructions

The Act also provides for recovery by an injured plaintiff when a manufacturer fails to provide adequate warnings or instructions, even after the aircraft is sold, and such failure is the proximate cause of the plaintiff's injury. This duty already exists at common law and has

115 H.R. 1307, supra note 12, § 722(b)(2). An injured plaintiff:
been incorporated into the Restatement.\textsuperscript{116}

In Berkebile \textit{v. Brantly Helicopter Corp.}\textsuperscript{117} the Superior Pennsylvania Supreme Court held the manufacturer of a helicopter liable for its failure to provide adequate warning of a dangerous characteristic.\textsuperscript{118} The characteristic in question was the difficulty in placing the helicopter in autorotation if the engine failed in climbing flight.\textsuperscript{119} The flight manual for the helicopter discussed in detail autorotation during cruising flight (the least dangerous situation), but failed to mention the difficulty of autorotation during climbing flight (the most dangerous situation).\textsuperscript{120}

The court recognized that the failure to provide adequate warnings could constitute a defective product under

\begin{itemize}
  \item may recover damages from that general aviation manufacturer if -
  \begin{enumerate}
    \item at the time the product left the control of the manufacturer, the manufacturer —
      \begin{enumerate}
        \item knew, or in the exercise of reasonable care should have known, about a danger connected with the product that caused the claimant's harm; and
        \item failed to provide the warnings or instructions that a person exercising reasonable care would have provided with respect to the danger which caused the harm alleged by the claimant, unless those warnings or instructions, if provided, would not have materially affected the conduct of the product user; or
      \end{enumerate}
    \item after the product left the control of the general aviation manufacturer, the manufacturer —
      \begin{enumerate}
        \item knew, or in the exercise of reasonable care should have known, about the danger which caused the claimant's harm; and
        \item failed to take reasonable steps to provide warnings or instructions, after the manufacture of the product, which would have been provided by a person exercising reasonable care, unless those warnings or instructions, if provided, would not have materially affected the conduct of the product user;
      \end{enumerate}
  \end{enumerate}
  and the failure to provide warnings or instructions described in subparagraph (A) or (B) is a proximate cause of the claimant's harm.
\end{itemize}

\textit{Id.}\textsuperscript{116} \textsc{Restatement (Second) of Torts} § 402A comment j (1964) "In order to prevent the product from being unreasonably dangerous, the seller may be required to give directions or warning, on the container, as to its use." \textit{Id.; see also id. comment h} (a product is defective if sold without an adequate warning of any inherent dangers).

\textsuperscript{117} \textit{Id.}, 337 A.2d at 902-903.

\textsuperscript{118} \textit{Id.}, 337 A.2d at 903.
a strict liability theory. The court emphasized that the "reasonable man" standard does not govern questions regarding what constitutes a necessary instruction or warning. The sole question for the jury is whether the manufacturer provided the user with adequate instructions and warnings to make the product safe.

A manufacturer also has a duty to warn consumers of defects that the manufacturer becomes aware of after the sale of the product. In Braniff Airways, Inc. v. Curtiss-Wright Corp., an aircraft manufacturer was held liable for a crash resulting from engine difficulties. The evidence showed that the manufacturer was aware of the problem before the accident occurred, but failed to take any action to remedy the problem. The court held that the manufacturer had a duty to correct the problem, if feasible, or if not feasible, at least to provide the consumer with adequate warnings.

Presently, actions for failure to warn may be brought under either a negligence or strict products liability theory. Failure to warn cases brought under a negligence

121 Id. "A 'defective condition' is not limited to defects in design or manufacture. . . . A seller must give such warning and instructions as are required to inform the user or consumer of the possible risks and inherent limitations of his product. Id. at 902 (citations omitted).

122 Id.

123 Id. In determining whether the instructions or warnings are adequate, "[t]he jury should view the relative degrees of danger associated with use of the product since a greater degree of danger requires a greater degree of protection." Id.

129 See id. (failure to warn under a negligence theory); Berkebile, 462 Pa. at 83, 337 A.2d at 893 (failure to warn constitutes a defective product under a strict
theory impose a reasonableness standard for a manufacturer's failure to warn. Courts do not agree on whether a failure to warn under a strict liability theory imposes this same reasonableness standard. The Act settles the dispute by imposing a reasonableness standard on a manufacturer's failure to warn. Thus, the failure of a manufacturer to warn of a dangerous condition of its product, under the Act, will be judged under a reasonableness standard. If a manufacturer is unaware of any danger, and reasonably should not be aware, the manufacturer will not be responsible for any harm created by its failure to provide an adequate warning.

The Act also provides a defense to a manufacturer if it is shown that the warning or instruction would not have altered the conduct of the product user. If a manufacturer can show that a warning or instruction would have been ignored, the plaintiff cannot hold the manufacturer liable for its failure to warn.

D. Warranty

Finally, the Act establishes liability for the breach of express warranties. Section 2-313 of the Uniform Com-
mercial Code (U.C.C.) governs the creation of express warranties. Section 2-313 provides that express warranties are created in three different ways: (1) any affirmation of fact or promise made by the seller to the buyer relating to the goods which becomes part of the basis for the bargain; (2) any description of the goods which becomes part of the basis for the bargain; and (3) any sample or model of the goods which becomes part of the basis for the bargain. An express warranty does not have to be created by contract; it may arise from an advertisement or brochure.

Although the Act does not change existing law as it relates to express warranties, it does preclude recovery under an implied warranty. Presently, the U.C.C. recognizes implied warranties in section 2-314 (merchantability) and section 2-315 (fitness for a specific purpose). The use of a warranty theory does not require the plaintiff to show that the manufacturer's actions were negligent or that the defective product was unreasonably dangerous. The plaintiff merely has to show that

(B) the warranty relates to that aspect of the product which caused the harm;
(C) the product failed to conform to the warranty; and
(D) the failure of the product to conform to the warranty is a proximate cause of the claimant's harm.

Id.

136 U.C.C. § 2-313 (1988). Section 2-313 has been adopted in all states except Louisiana.

137 Id.

139 U.C.C. §§ 2-314, 2-315 (1988) "Unless excluded or modified . . . a warranty that the goods shall be merchantable is implied in a contract for their sale if the seller is a merchant with respect to goods of that kind." Id. § 2-314(1). In order to be merchantable, among other things, the goods must be fit for the ordinary purpose for which they are used. Id. § 2-324(2)(c)

Where the seller at the time of contracting has reason to know any particular purpose for which the goods are required and that the buyer is relying on the seller's skill or judgment to select or furnish suitable goods, there is unless excluded or modified . . . an implied warranty that the goods shall be fit for such purpose.

the product was not fit for its intended use.\textsuperscript{140} This eases the plaintiff's burden of proof. Undoubtedly, the elimination of implied warranties will create at least a small ripple on the aviation liability front.\textsuperscript{141}

III. Other Provisions

A. Airworthiness Directives

The Act provides an absolute defense for manufacturers if an airworthiness directive\textsuperscript{142} has been issued, and if by complying with the directive, the defect would have been corrected prior to any injury.\textsuperscript{143} Airworthiness directives are issued by the Federal Aviation Administration (FAA) when it determines that an unsafe condition exists.\textsuperscript{144} An aircraft is allowed to operate only if it is in compliance with all airworthiness directives.\textsuperscript{145}

Presently, violation of an airworthiness directive by a plaintiff may constitute negligence per se and thus, in those jurisdictions which treat contributory negligence as a complete bar to recovery, violation of an airworthiness directive would preclude any recovery for the plaintiff.\textsuperscript{146}

\textsuperscript{142} The senate bill includes service bulletins issued by the manufacturer. S. 640, supra note 12, § 5(c).

\textsuperscript{143} H.R. 1307, supra note 12, § 722(c). [A] general aviation manufacturer shall not be liable if such manufacturer proves, by a preponderance of the evidence, that

(1) the defective condition could have been corrected by compliance with action described in an airworthiness directive issued by the Administrator; and

(2) such directive was issued at a reasonable time before the date of the accident and after the product left the control of the general aviation manufacturer.

\textsuperscript{145} 14 C.F.R. § 39.3.

In jurisdictions employing comparative responsibility, the act of violation is merely a factor when apportioning fault between the parties. Somewhat inconsistently, the Act treats the violation of an airworthiness directive as negligence per se under a contributory negligence system, completely denying recovery to a person operating an aircraft in violation of an airworthiness directive. This provides a huge escape for manufacturers. Completely denying recovery to a plaintiff operating an aircraft in violation of an airworthiness directive is inconsistent with the Act's comparative responsibility provisions which mandate the use of comparative responsibility in all other situations.\(^{147}\)

B. Comparative Responsibility

The Act establishes the use of comparative responsibility in all general aviation accident cases.\(^{148}\) Comparative responsibility involves the apportionment of liability and damages between the parties to the suit.\(^{149}\) Under a pure comparative responsibility system, a plaintiff is able to recover from a defendant the defendant's share of liability regardless of the plaintiff's share of responsibility.\(^{150}\) Under a modified comparative responsibility system, if the fault attributable to the plaintiff exceeds a certain percentage, the plaintiff is denied any recovery.\(^{151}\) The Act

\(^{147}\) See infra notes 148-162 and accompanying text.

\(^{148}\) H.R. 1307, supra note 12, § 723(a). "All actions governed by this subtitle shall be governed be the principles of comparative responsibility." Id.

\(^{150}\) Id. at 428-29. Thus, under a pure system, if the plaintiff were 99% at fault, he could still recover from the defendant the 1% the defendant was at fault. Id.

\(^{151}\) Id. Thus, if the jurisdiction has adopted a modified system with a threshold of 50%, and the plaintiff's fault is 50% or greater, the plaintiff will recover nothing. Id.
adopts a pure comparative system.\textsuperscript{152} Most jurisdictions have adopted a modified system.\textsuperscript{153}

A few jurisdictions continue to follow the rule of contributory negligence.\textsuperscript{154} The problem with contributory negligence is that it is an all or nothing approach. If the plaintiff is the least bit contributorily negligent, he recovers nothing.\textsuperscript{155} Most jurisdictions recognize the inequities of denying recovery to a plaintiff that is only slightly negligent when the defendant is responsible for the remaining fault either through negligence, strict liability, or warranty. Other jurisdictions recognize comparative responsibility as a defense, but do not allow its use in strict liability cases.\textsuperscript{156} Still other jurisdictions see no theoretical problem with applying comparative responsibility in strict liability cases.\textsuperscript{157}

In \textit{Butuad v. Suburban Marine \& Sporting Goods, Inc.},\textsuperscript{158} the Alaska Supreme Court applied comparative responsibility to a strict liability suit.\textsuperscript{159} The court did not interpret strict liability as being absolute liability, and thus refused to hold a manufacturer an “insurer of his product with respect to all harm generated by its use.”\textsuperscript{160} The court felt that in situations where the defendant is responsible

\textsuperscript{152} H.R. 1907, \textit{supra} note 12, § 723(a). “Comparative responsibility attributed to the claimant’s conduct shall not bar recovery in such an action, but shall reduce any damages awarded to the claimant in an amount proportionate to the responsibility of the claimant.” \textit{Id.}

\textsuperscript{153} \textit{See} W. \textit{Turley}, \textit{supra} note 67, app. C, for a table of states adopting comparative responsibility.

\textsuperscript{154} Marley v. Kirby, 271 S.C. 122, 245 S.E.2d 604 (1978) (comparative negligence statute is unconstitutional); Street v. Calvert, 541 S.W.2d 576 (Tenn. 1976) (Tennessee Supreme Court declines to adopt comparative negligence).

\textsuperscript{155} 57A AM. JUR. 2d Negligence § 960 (1989).

\textsuperscript{156} \textit{See}, Melia v. Ford Motor Co., 534 F.2d 795 (8th Cir. 1976) (comparative responsibility denied by statute in strict liability cases); West v. Caterpillar Tractor Co., 336 So. 2d 80 (Fla. 1976) (comparative responsibility does not apply in strict product liability actions if the fault of the plaintiff is his failure to discover the defect or guard against it); Kirkland v. General Motors Corp., 521 P.2d 1353 (Okla. 1974) (comparative responsibility only applies in negligence actions).

\textsuperscript{158} 555 P.2d 42 (Alaska 1976).

\textsuperscript{159} \textit{Id.}

\textsuperscript{160} \textit{Id.} at 45.
for producing a defective product, the plaintiff is nevertheless responsible for his own actions which contributed to the accident. The court also saw no violation of the public policy reasons inherent in strict liability by allowing comparative responsibility.

With the passage of the Act, all confusion as to when comparative responsibility applies and when it does not is eliminated. Jurisdictions will no longer have a choice of whether or not to apply it to strict liability cases, or even whether to apply it at all. Comparative responsibility will apply across the board, in cases brought in negligence, strict liability, or warranty, for recovery in general aviation accidents.

C. Joint and Several Liability

Another of the more controversial provisions of the Act eliminates joint and several liability between joint tortfeasors. The only exception is that a general aviation manufacturer of an airframe is jointly and severally liable with a manufacturer of a component installed in the

---

161 Id. at 45-46.
162 Id. at 46. "The manufacturer is still accountable for all the harm from a defective product, except that part caused by the consumer's own conduct." Id.; see also Sun Valley Airlines, Inc. v. Avco-Lycoming Corp., 411 F. Supp. 598 (D. Idaho 1976) (use of comparative responsibility in a strict liability case).
163 H.R. 1307, supra note 12, § 723(b)-(c).

(b) . . . Except as provided in subsection (c), a defendant is severally but not jointly liable in an action governed by this subtitle, and the liability of any defendant in any such action shall be determined on the basis of that defendant's proportionate share of responsibility for the claimant's damages.

(c) . . . In an action governed by this subtitle (1) a general aviation manufacturer who is the builder or manufacturer of the airframe of the general aviation aircraft involved is jointly and severally liable for damages for harm caused by a defective system, component, subassembly, or other part of that aircraft that the manufacturer installed or certified as part of the original type design for that aircraft; and (2) a general aviation manufacturer who is the manufacturer of a system or component of the general aviation aircraft involved is jointly and severally liable for damages for harm caused by a defective subassembly or other part of that system or component.

Id. (headings omitted).
aircraft if the harm is caused by the component.\textsuperscript{164} Currently, the general rule in most jurisdictions is that joint tortfeasors are jointly and severally liable for any nonapportionable injury to the plaintiff, regardless of whether the defendants acted in concert.\textsuperscript{165}

The current rule is set out clearly in \textit{Phillips Petroleum Co. v. Hardee}.\textsuperscript{166} The plaintiffs were rice farmers who used a creek for irrigating their rice.\textsuperscript{167} The defendants were oil companies who allegedly polluted the creek, causing the failure of the plaintiffs’ rice crop.\textsuperscript{168} The Fifth Circuit held that jury instructions which provided that each defendant must be the sole cause of the injury in order to be liable were improper.\textsuperscript{169} The court went on to say that if the harm is incapable of being apportioned, then the joint tortfeasors are jointly and severally liable.\textsuperscript{170}

Enactment of this provision of the Act will provide much welcome relief to the general aviation industry. No longer will “deep pockets” be fully responsible for the entire judgment if only partially responsible for the injury. In reality the only change from the current law will be in

\textsuperscript{164} Id.
\textsuperscript{165} 74 Am. Jur. 2d Torts \S 62 (1974); see also Restatement (Second) of Torts \S 879 (1977) (joint tortfeasors are jointly and severally liable if each is legal cause of harm that can not be apportioned regardless of whether their conduct is concurring or consecutive). But see 74 Am. Jur. 2d Torts \S 68 (1974) (joint liability not recognized in some jurisdictions); Mitchell Realty Co. v. City of West Allis, 184 Wis. 352, 199 N.W. 390 (1924) (joint and several liability between joint tortfeasors only as strictly necessary).

\textsuperscript{170} Id. at 212.

According to the great weight of authority where the concurrent or successive acts or omissions of two or more persons, although acting independently of each other, are in combination, the direct or proximate cause of a single injury to a third person, and it is impossible to determine in what proportion each contributed to the injury, either is responsible for the whole injury . . . .

\textit{Id.} at 212 (citation omitted). See also Browne v. McDonnell Douglas Corp., 504 F. Supp. 514 (N.D. Cal. 1980) (under California law joint tortfeasors are responsible for entire amount of damages); Hart v. Cessna Aircraft Co., 276 N.W.2d 166 (Minn. 1979) (joint tortfeasors are jointly and severally liable).
situations where a joint tortfeasor is someone other than a manufacturer of a component, such as a pilot or repair service. In situations where the injury is the result of the airframe manufacturer’s defect or the component manufacturer’s, both will continue to be jointly and severally liable.\(^{171}\)

D. Statutes of Repose

Another highly controversial change made to existing law by the Act is the adoption of a statute of repose applicable to any general aviation accident.\(^{172}\) The Act prevents any actions for injuries or harms arising out of a general aviation accident against a general aviation manufacturer if not brought within twelve years from the date of sale or lease of the product.\(^{173}\) This provision does not apply, however, to situations where the general aviation manufacturer has expressly warranted that the product life will exceed that provided for in the statute,\(^{174}\) nor in

\(^{171}\) See supra note 164 and accompanying text.

\(^{172}\) Statutes of repose prevent the creation of a cause of action beyond a specified period of time, unlike a statute of limitation which creates a requirement that the cause of action be pursued within a specified time after it has accrued. Comment, Statutes of Repose in Products Liability: Death Before Conception?, 37 Sw. L.J. 665, 666 (1983). H.R. 1307 and S. 640 also provide for a statute of limitation in general aviation accidents of within two years from the general aviation accident. H.R. 1307, supra note 12, § 728 and S. 640, supra note 12, § 11. Statutes of limitation are beyond the scope of this comment.

\(^{173}\) H.R. 1307, supra note 12, § 724.

No civil action for damages for harm arising out of a general aviation accident which is brought against a general aviation manufacturer may be brought for harm which is alleged to have been caused by an aircraft or a system, component, subassembly, or other part of an aircraft and which occurs more than -

1. 12 years from —

   (A) the date of delivery of the aircraft to its first purchaser or lessee, if delivered directly from the manufacturer, or

   (B) the date of the first delivery of the aircraft to a person engaged in the business of selling or leasing such an aircraft; or

2. with respect to any system, component, subassembly, or other part which replaced another product in, or which was added to, the aircraft, and which is alleged to have caused the claimant’s harm, 12 years from the date of the replacement or addition.

\(^{174}\) H.R. 1307, supra note 12, § 724(b).
situations where the manufacturer becomes aware of a defect after the sale of the product and fails to warn the user.\textsuperscript{175}

Statutes of repose were created in an attempt to deal with the crisis of skyrocketing products liability costs.\textsuperscript{176} This otherwise unlimited "tail" of liability has caused manufacturers and insurers to cry foul at their inability to accurately fix the cost of liability to pass along to consumers.\textsuperscript{177} Proponents of statutes of repose point out the difficulty in defending an action based on a defect in a product, or on a manufacturer's negligence, when the product was manufactured many years prior to the date of the injury.\textsuperscript{178} Evidence crucial to the defense may have long since disappeared.\textsuperscript{179} Furthermore, the product may have suffered misuse over the years or may have been modified, making liability more difficult to prove.\textsuperscript{180}

Opponents of statutes of repose have little sympathy for the proponents' claims of difficulty of a defense when a number of years have elapsed between the time of manufacture and the injury. They point out that the burden of proof in a products liability claim is always on the plaintiff.\textsuperscript{181} Furthermore, if it is difficult for the manufacturer to go back a number of years to defend a product, it is just as difficult for the plaintiff to go back as many years to prove the manufacturer's negligence or the existence of a defective product at the time of sale.\textsuperscript{182} Opponents contend that it is even more difficult for the plaintiff to overcome this time barrier because of the presumption that if the product has been performing safely for a number of years, then it was not defective at the time it was sold.\textsuperscript{183}

\textsuperscript{175} Id. § 724(c).

\textsuperscript{182} Id.
\textsuperscript{183} Id.
Opponents of statutes of repose also point out the apparent inconsistency between allowing statutes of repose to prevent actions from arising and the recognition of the doctrine of strict products liability. The inconsistency arises from the policy considerations of strict liability. Specifically, strict products liability was created to provide recovery to an injured plaintiff without the showing of culpable conduct on the part of the manufacturer. The theory is that the manufacturer is in a better position to bear the cost by passing it along to the consumer in the form of increased prices. Statutes of repose, however, place this cost on the person least able to afford it, the injured plaintiff.

Several states have already adopted various types of statutes of repose for product liability actions. Some statutes apply only to specific types of actions. Some merely create a rebuttable presumption that the useful life of the product has expired, and some are specifically excluded from application in certain circumstances.

Since inception, statutes of repose have come under fire on three different constitutional theories: equal protection, due process, and right of access to the courts.

---

184 See supra notes 58-114 and accompanying text for a discussion of strict products liability.
185 See supra notes 58-114 and accompanying text for a discussion of strict products liability.
186 Restatement (Second) of Torts § 402A, comment c (1964). “[P]ublic policy demands that the burden of accidental injuries caused by products intended for consumption be placed upon those who market them, and be treated as a cost of production against which liability insurance can be obtained.” Id.
188 See W. Turley, supra note 67, app. G (table of states that have adopted some form of a statute of repose applicable to products liability). Many states have adopted other forms of statutes of repose applying to either architects and engineers or to medical malpractice cases. See generally McGovern, The Variety, Policy and Constitutionality of Product Liability Statutes of Repose, 30 Am. U.L. Rev. 579 (1981).
189 See, e.g., Ill. Ann. Stat. ch. 110, para. 13-213(b) (Smith-Hurd 1984) (applies only to actions in strict liability); Ind. Code Ann. § 33-1-1.5-5 (Burns Supp. 1990) (only applies to actions in strict liability or negligence).
191 See, e.g., Tenn. Code Ann. § 29-28-103(b) (1980) (statute does not apply to asbestos claims).
192 Comment, supra note 172, at 684; see also McGovern, supra note 188, at 579
The best opportunity to challenge a statute of repose is under the guaranteed right of access to the courts found in several state constitutions. These state provisions generally guarantee a plaintiff access to the courts of his state.

In *Berry v. Beech Aircraft Corp.*, the Supreme Court of Utah invalidated a statute of repose on the grounds that it violated the provision of the Utah Constitution that provided that all courts were open to all injured parties. The action in *Berry* was brought in connection with the crash of a twenty-three year old aircraft. The court held that Utah's open court provision restricted the legislature's right to modify common law remedies without providing for alternative remedies. With a clear social or economic evil present, the legislature can eliminate a common law remedy only if the elimination is neither arbitrary nor unreasonable. The court failed to find a clear social or economic evil eliminated by the statute of repose and thus ruled that it was unconstitutional.

Other state courts have ruled that statutes of repose do not violate state constitutional provisions guaranteeing access to the courts. In *Dague v. Piper Aircraft Corp.*, (discussion of the various policy and constitutional issues surrounding statutes of repose).

201 Dague v. Piper Aircraft Corp., 275 Ind. 520, 418 N.E.2d 207 (1981); Thorn-
the Indiana Supreme Court held that a statute of repose was constitutional even though the Indiana Constitution had an open court provision almost identical to the one found in Berry.\textsuperscript{203} The action in Dague was filed in connection with the crash of a thirteen year old aircraft.\textsuperscript{204} The court held that the plaintiff's cause of action was prohibited by a statute of repose requiring actions for product liability be brought within ten years of the date of the delivery of the product to the original consumer.\textsuperscript{205} Unlike the Berry court, the Dague court broadly construed the powers of the legislature, finding that the legislature could eliminate or modify common law rights or remedies.\textsuperscript{206} Furthermore, the court held that if the legislature took away a common law right or remedy, there was no obligation to provide an alternative remedy.\textsuperscript{207}

E. Punitive Damages

The Act provides for punitive damages in situations where the harm incurred by the injured party directly re-

\textsuperscript{203} Id. at 520, 418 N.E.2d at 213. The open court provision of the Indiana Constitution states that "[a]ll courts shall be open; and every person, for injury done to him in his person, property, or reputation, shall have remedy by due course of law." \textit{IND. CONST.} art. I, § 12.

\textsuperscript{204} Dague, 275 Ind. at 520, 418 N.E.2d at 209.

\textsuperscript{205} Id. at 520, 418 N.E.2d at 211. The statute in question mandates the following:

\begin{quote}
[\textit{any product liability action must be commenced within two years after the cause of action accrues or within ten years after the delivery of the product to the initial user or consumer; except that, if the cause of action accrues more than eight years but not more than ten years after the initial delivery, the action may be commenced at any time within two years after the cause of action accrues.}
\end{quote}

\textit{IND. CODE ANN.} § 33-1-1.5-5 (Burns Supp. 1989). The Indiana Supreme Court decided that the legislature intended the "or" present within the phrase "action accrues or within ten years" to be an "and." \textit{Dague}, 275 Ind. at 520, 418 N.E.2d at 211.

\textsuperscript{206} Id. at 520, 418 N.E.2d at 213. "Both this Court and the United States Supreme Court have upheld the right of states to abolish or modify the common law." \textit{Id.} (quoting \textit{Sidle v. Majors}, 264 Ind. 206, 209, 341 N.E.2d 763, 766 (1976)).

\textsuperscript{207} Id.
sults from conduct manifesting a conscious and flagrant indifference to the safety of those persons who might be harmed by the use of the general aviation aircraft. In order to recover punitive damages, the Act further provides that the claimant must meet the burden of proof with clear and convincing evidence.

Presently, most states permit the recovery of punitive damages in situations where the conduct of the party causing an injury is more reprehensible than ordinary tortious conduct. Some states restrict the use of punitive damages to those situations expressly authorized by statute. Punitive damages are intended to punish the wrongdoer for its reprehensible behavior and further to deter the wrongdoer and others from future harmful conduct.

Various standards are utilized by different states to determine whether the conduct of the party is sufficient to award punitive damages. Some standards are statuto-

210 DAMAGES IN TORT ACTIONS, § 40.21 at 40-76 (1989); see also Kritser v. Beech Aircraft Corp., 479 F.2d 1089 (5th Cir. 1973) (punitive damages allowable in wrongful death action under Texas law against aircraft manufacturer); Piper Aircraft Corp. v. Coulter, 426 So. 2d 1108 (Fla. Dist. Ct. App. 1983) (punitive damages allowable in a products liability claim against an aircraft manufacturer); Walter v. Cessna Aircraft Co., 121 Wis. 2d 221, 358 N.W.2d 816 (Wis. Ct. App. 1984) (punitive damages allowable in strict liability or negligence claim against aircraft manufacturer for design defect); RESTATEMENT (SECOND) OF TORTS § 908 (1977); J. GHIARDI & J. KIRCHER, PUNITIVE DAMAGES LAW AND PRACTICE, § 4.19 at 40 (Supp. 1990) (summary of states’ positions on allowance of punitive damages).
212 RESTATEMENT (SECOND) OF TORTS § 908(1) (1977); see also Chrysler Corp. v. Wolmer, 499 So. 2d 823 (Fla. 1986) (punitive damages are imposed to punish wrongdoer and to deter others from similar activity); Snowden v. Osborne, 269 So. 2d 858 (Miss. 1972) (punitive damages are granted to punish wrongdoer and to set an example so that others may be deterred from committing similar offenses); O'Donnell v. K-Mart Corp., 100 A.D.2d 488, 474 N.Y.S.2d 344 (1984) (purpose of punitive damages is to punish and deter a defendant and to deter others from committing similar acts).
213 The Restatement allows punitive damages “for conduct that is outrageous, be-
rily imposed. Others are imposed by the courts. The Act imposes the standard of "a conscious and flagrant indifference to the safety of those persons who might be harmed by the use of the general aviation aircraft" in order to recover punitive damages.

The legislative histories of the Act and S. 640 shed little light on whether the standard of "a conscious and flagrant indifference to the safety" is the same as those standards currently in use in the different states. The standards generally in current use include fraud, ill will, maliciousness, wantonness, recklessness, oppressiveness, and the reckless disregard for the rights of others. Mere negligence, however, was not contemplated by the drafters as providing grounds for recovery of punitive damages.

cause of the defendant's evil motive or his reckless indifference to the rights of others." Restatement (Second) of Torts § 908(2) (1977).

215 See, e.g., Smith v. Chapman, 115 Ariz. 211, 564 P.2d 900 (1977) (punitive damages awarded for acts done with bad motive or with reckless indifference to the rights of others); Wagman v. Lee, 457 A.2d 401 (D.C. 1983) (punitive damages may be awarded when the defendant's conduct is accompanied by fraud, ill will, recklessness, wantonness, oppressiveness, willful disregard for the plaintiff's rights or other circumstances tending to aggravate), cert. denied, 464 U.S. 849 (1983); Hall v. American Airlines, 1 Haw. App. 258, 617 P.2d 1230 (1980) (defendant's wrongful act must be done willfully, wantonly or maliciously, or characterized by some aggravating circumstances to subject it to punitive damages); Horton v. Union Light, Heat & Power Co., 690 S.W.2d 382 (Ky. 1985) (punitive damages are awarded for defendant's outrageous conduct).

216 H.R. 1307, supra note 12, § 727(a).

217 S. 640 actually provides for a standard of "conscious, flagrant indifference . . . ." S. 640, supra note 12, § 10(a). The replacement of "and" in H.R. 1307 with a comma in S. 640 does not appear to create a different interpretation of the provision between the two bills. The committee report on H.R. 1307 from the House Committee on Public Works and Transportation does not provide any assistance in the interpretation of the standard.

218 See sources cited supra notes 213-215.

Since the standards in current use are often defined in a manner similar to the standard found in the Act, the imposition of "a conscious and flagrant indifference" standard should cause no change to the present substantive law.  

The imposition in the Act of a clear and convincing burden of proof standard for imposing punitive damages will change the law in some jurisdictions. Many states already employ a clear and convincing standard for imposing punitive damages. Other states, however, continue to use the general civil standard of a preponderance of the evidence as the burden of proof required to recover punitive damages.

The Act also addresses the admission of financial evidence in order to determine the amount of punitive damages necessary to punish the wrongdoer. Specifically, the Act provides that financial information regarding the defendant cannot be admitted until the claimant establishes that it can present evidence establishing prima facie proof of conduct allowing the recovery of punitive damages.

---

222 See, e.g., Deshmukh, 630 F. Supp. at 960-61; Hawkins, 152 Ariz. at 490, 733 P.2d at 1087; Wangen, 97 Wis. 2d at 260, 294 N.W.2d at 457.

224 H.R. 1307, supra note 12, § 727(b). The Act provides the following: [Evidence regarding the financial worth of a defendant or the defendant's profits or any other financial evidence relating solely to a claim for punitive damages under this subtitle is not admissible un-
Most states presently allow the admission of financial evidence concerning the defendant for the determination of punitive damages. Some allow the evidence during trial after the claimant has made a prima facie showing that the claimant is entitled to punitive damages, while others only allow the admission of the evidence after the defendant has been held responsible for punitive damages.

Admitting evidence of the defendant's wealth raises two obvious concerns. First, the evidence may have a prejudicial effect on the trier of fact during the determination of liability and, second, it is an invasion of privacy into what typically are confidential affairs. The drafters of the Act, along with some states, believe that requiring a plaintiff to prove a prima facie right to punitive damages prior

---

less the claimant establishes, before any such evidence is offered, that the claimant can present evidence that will establish prima facie proof of conduct manifesting a conscious and flagrant indifference to the safety of those persons who might be harmed by use of the general aviation aircraft involved.

Id. S. 640 also provides that if the harm incurred is death and the applicable state law only provides for punitive damages, then the claimant does not have to meet the requirements of § 10(a) in order to collect punitive damages under state law. S. 640, supra note 12, § 10(c).

See, e.g. ALA. CODE § 6-11-23(b) (Supp. 1990) (in all cases where a verdict for punitive damages is awarded, on motion of a party, the court shall hear evidence on the amount of punitive damages including the economic impact on the defendant); CAL. CIV. CODE § 3295(a) (West Supp. 1990) (court may grant the defendant a protective order requiring the claimant to show a prima facie case for punitive damages prior to allowing financial information about the defendant into evidence); MONT. CODE ANN. § 27-1-221(7)(a) (1989) (after return of a verdict the jury shall determine the amount of punitive damages taking into consideration the defendant's financial affairs, financial condition and net worth); OR. REV. STAT. § 30.925(2) (1988) (during course of a trial, evidence concerning the defendant's ability to pay shall not be admitted until the claimant establishes a prima facie right to recover punitive damages); see also Gierman v. Toman, 77 N.J. Super. 18, 185 A.2d 241 (Law Div. 1962) (orderly procedure requires that a prima facie right to recover punitive damages must be shown prior to the disclosure of the wealth of the defendant); Campen v. Stone, 635 P.2d 1121 (Wyo. 1981) (the jury may hear evidence of the defendant's financial status after they have returned a verdict for punitive damages).

Campen, 635 P.2d at 1127-28.
to the admission of evidence concerning the defendant's wealth, protects the defendant against the needless invasion of privacy and prejudice on the part of the trier of fact. This standard, however, does not protect the defendant to the extent that an exclusion until after liability has been found would. Once a plaintiff makes a prima facie case, the defendant still has an opportunity to rebut the plaintiff's case. Under the standard established by the Act, financial evidence is submitted prior to a finding of liability on the part of the defendant, thus impacting the liability decision of the trier of fact and possibly requiring the needless disclosure of private information by the defendant. The standard established by the Act eases the burden on plaintiffs by making it easier to prove punitive damages by allowing potentially prejudicial evidence to reach the trier of fact prior to a decision on liability. The burden on the defendant is also increased to the extent the defendant will have to furnish confidential financial information prior to any finding of liability for punitive damages.

F. Jurisdiction and Venue

The Act provides for concurrent federal and state subject matter jurisdiction over general aviation accidents, regardless of the amount in controversy. Presently a federal court can try a general aviation accident case only if the parties in the action are residents of different states and the amount in controversy exceeds $50,000. None of the plaintiffs and defendants (if more than one) may be

---

228 H.R. 1307, supra note 12, § 729(a). "The district courts of the United States, concurrently with the State courts, shall have original jurisdiction, without regard to the amount in controversy, in all actions governed by section 722 [general provisions relating to liability] and in all actions for indemnity or contribution described in section 723(d) of this subtitle." Id.

229 28 U.S.C. § 1332(a) (1988). "The district courts shall have original jurisdiction of all civil actions where the matter in controversy exceeds the sum or value of $50,000, exclusive of interest and costs, and is between citizens of different States; ..." Id. Other statutes granting jurisdiction to federal courts are 28 U.S.C. § 1331 (federal question jurisdiction) and 28 U.S.C. § 1333 (admiralty and prize jurisdiction).
residents of the same state. A corporation is considered a resident of a state if it is incorporated in the state or its principal place of business is located in the state. Due to the nature of aircraft accidents and the subsequent suits, the diversity requirement is probably met in most cases brought currently; thus, this change will likely have little impact on the current system.

The Act also allows removal of an action from a state court to a federal district court at the discretion of any defendant. This provision mirrors the present law. Although not changing present law, the combination of this provision with the provision that federal district courts will always have original jurisdiction provides the

---

231 28 U.S.C. § 1332(c)(1). "[A] corporation shall be deemed to be a citizen of any State by which it has been incorporated and of the State where it has its principal place of business . . . ." Id. Two approaches are used to determine a corporation's principal place of business. See Kelly v. United States Steel Corp., 284 F.2d 850 (3d Cir. 1960) (principal place of business of a corporation is the location where the primary day to day activities of the corporation take place); Scot Typewriter Co. v. Underwood Corp., 170 F. Supp. 862 (S.D.N.Y. 1959) (principal place of business of a corporation is the nerve center of the corporation, where the officers and directors coordinate and direct the activities of the corporation).
232 Since aircraft manufacturers are headquartered and incorporated in relatively few states and aircraft by nature are distributed widely, the odds are that in any given accident, diversity will exist between the plaintiff and the defendants. In order for a state court, or a federal court within a particular state, to exercise personal jurisdiction over a nonresident defendant, the nonresident must have sufficient contacts within the jurisdiction. International Shoe Co. v. Washington, 326 U.S. 310 (1945). The Act has no effect on the requirements of personal jurisdiction.
233 H.R. 1307, supra note 12, § 729(b).
A civil action which is brought in a State court may be removed to the district court of the United States for the district embracing the place where the action is pending, without the consent of any other party and without regard to the amount in controversy, by any defendant against whom a claim in the action is asserted for damages for harm arising out of a general aviation accident.

Id.
[A]ny civil action brought in a State court of which the district courts of the United States have original jurisdiction, may be removed by the defendant or the defendants, to the district court of the United States for the district and division embracing the place where such action is pending.
Id. § 1441(a).
defendant with unlimited control over whether the case is tried in state court or federal court. Any advantages which might exist in state court for the plaintiff are easily circumvented by the defendant's request for removal, which the judge has no choice but to allow.\textsuperscript{235}

The Act also provides federal courts with pendent jurisdiction to hear state law claims arising out of a general aviation accident if a "substantial question of fact" is common to both the state and federal claims.\textsuperscript{236} Present law gives federal courts pendent jurisdiction to decide state law claims if the state and federal claims arise out of a "common nucleus of operative fact."\textsuperscript{237} The present standard and the one proposed by the Act appear to be the same.

Like pendent jurisdiction, the provisions of the Act relating to venue are essentially the same as those that currently exist. Under the Act, venue will exist in a district court if the claim arose within the district, or any plaintiff or defendant resides within the district.\textsuperscript{238} A corporation is deemed a resident of any state in which it is incorporated, licensed to do business, or is actually doing business.\textsuperscript{239} Furthermore, an action can be transferred to any other district, upon motion of any party or on the court's motion, "for the convenience of parties and witnesses in the interest of justice."\textsuperscript{240} Present law provides for the

same result.241

IV. CONCLUSION

No one involved in the general aviation industry would argue that a plaintiff injured due to the fault of a general aviation manufacturer should not be compensated. The Act does not prevent recovery by deserving plaintiffs. Since the advent of strict liability, the balance on the scales of liability has been disproportionately on the side of the plaintiff with an obvious effect on the general aviation industry. The Act merely shifts this balance toward equilibrium.

The Act does not prevent recovery in a general aviation accident from a party that is liable under current law.242 Nor does the Act place a limit on the amount of damages a plaintiff may be awarded, or on the amount of attorneys' fees that may be awarded. The Act merely attempts to limit the liability of a general aviation manufacturer to those situations where, through fault of the manufacturer, its product causes an injury. By limiting this liability to a fixed period and a fixed number of situations, insurers can accurately predict the liability cost of a product, thus reducing the cost of insurance. By reducing the cost of insurance, the cost of aircraft will decline, with the resulting impact felt in all phases of the economy.

The policy reasons for strict liability are twofold: (1) to compensate the injured, and (2) to place the burden of risk on those who can best protect against it.243 Nothing in the Act is designed to prevent the compensation of deserving, injured plaintiffs. Nor does the Act shift the entire burden of risk onto the plaintiff. The general aviation manufacturer still has to insure that it has not negligently designed or manufactured its product and that it is using state of the art technology in its manufacture and design.

241 28 U.S.C. §§ 1391(a), (c), 1404(a).
242 See supra notes 14-24 and accompanying text.
243 See supra notes 58-114 and accompanying text.
Furthermore, the users of general aviation products arguably should absorb some of the risks associated with flying themselves, through insurance or otherwise. The typical user of general aviation products is generally not the poor defenseless consumer needing the overabundance of protection provided by the current state of liability laws. Flying is not completely risk-free, and those participating in it should be forced to bear some of the risk of their participation.

Also, under the Act the manufacturer continues to have an incentive to design and manufacture a safe product. If the manufacturer fails to do so, the laws of the marketplace will come into play and no one will be willing to purchase an unsafe aircraft. Furthermore, the manufacturer is constrained by the rules and regulations of the FAA. The general aviation industry is one of the most highly regulated industries in the United States. Although FAA guidelines are only minimums, they are designed to insure a safe aircraft.

The policy arguments favoring the consumer of general aviation products are on one side of the scale while on the other side are the prohibitive liability costs and the impact they have on the general aviation industry. Although Congress' inaction prevented the passage of the Act during the 101st session, undoubtedly the aviation industry will try again during the 102nd Congress. Congress will then have another chance to bring stability and hope to an industry still mired in the recession of the 1970s.
