**RECENT DECISIONS**

**Federal Practice: Class Actions**—A Class Action May Not Be Maintained If The Alleged “Class” Includes Only Twenty-Eight Persons And If The Plaintiff-Representative Cannot Establish Geographic Dissemination Of The Members Of The “Class” Or Minuteness Of Individual Damages. *Kinzler v. New York Stock Exchange*, 53 F.R.D. 75 (S.D.N.Y. 1971) 83
ECONOMIC REGULATION OF THE WORLD'S AIRLINES
A Political Analysis
William E.O'Connor

Contending that there has been too much nationalism and too little international cooperation in the economic regulation of world airline service, Dr. O'Connor, Assistant Chief of Supplementary Services Division of the Civil Aeronautics Board, evaluates the network of some 2,500 bilateral agreements constituting the present inadequate system. He reviews attempts made from 1944 to 1969 to achieve a multilateral system, analyzes national aviation interests, and reviews the competitive situation of world airline service.

He analyzes several systems of regulation that have been proposed, citing the 1946 Draft Agreement as the best choice. Being realistic, he acknowledges that it would involve so far-reaching a delegation of regulatory powers to an international body that it is unlikely that many governments would agree to it. He then proposes a “second-best” system and a reorientation of governmental philosophy toward viewing the network of airlines less in terms of national interest and more as a public trust for the world’s people. 240 pp., tables, appendix, index, bibilog.  $15.00

CIVIL AVIATION DEVELOPMENT:
A Policy and Operations Analysis
Prepared by Arthur D. Little, Inc.; Robert C. Fraser, Alan D. Donheiser, Thomas G. Miller, Jr.

In this report to the Joint Department of Transportation/NASA Civil Aviation Policy Study, the Arthur D. Little firm examines the constraints on U.S. civil aviation research and development, then presents and evaluates options for countering these constraints. The authors contend that recognized needs for new civil aviation technology have not been translated into a clear market to which private enterprise can respond, largely because of civil aviation’s limited political constituency and the economic conditions facing the industry.

They criticize the present regulatory system for fragmentation of the decision-making process at all levels of government and for the lack of coordination among DOT, FAA, and NASA. They examine R&D, defining the problems involved and citing ways in which the government and industry are not meeting the research challenge. They also assess legislative and regulatory factors, airport siting and development, commercial helicopter operations, air cargo, and STOL systems.

Among their recommendations: more cohesive decision-making processes at all levels of government, introduction of incentives for innovation, the funding of market demonstration programs and aeronautical research, advance multiple-site acquisition for future airports, and, to broaden political support, multiple use of such sites. 226 pp., tables, figures, appendix $12.50
